PROGRESS REPORT · WORK SO FAR

Progress so far: the full product is clickable across buyer, supplier and our ops console

The frontend is complete for all three roles as a working web app: SAP-style structure, numbered documents, dense tables, document flow and a command bar, with a clean modern finish. Every screen runs on a fictional sandbox dataset through a typed API layer, so the backend plugs in without changing a screen. Hosting on AWS is defined as code and ready to deploy.

SCREENS & STATES	ROLES	CANVAS REVIEW ITEMS	UNIT TESTS	TYPE ERRORS
57	3	11/11	16/16	0
in this report	Buyer · Supplier · Admin	KYB, Compare, GRN, Admin …	money maths, 3-way match, DoA	TypeScript strict

Built so far

FOUNDATION

- React + TypeScript web app, code split by role
- Typed API layer: runs on sandbox data; the real backend plugs in behind it
- Design system: Archivo, Public Sans, IBM Plex Mono; flat, 1 px rules, 4 px radius
- Desktop shell with 224 px sidebar and footer key bar; phone shell with four tabs

SHARED COMPONENTS

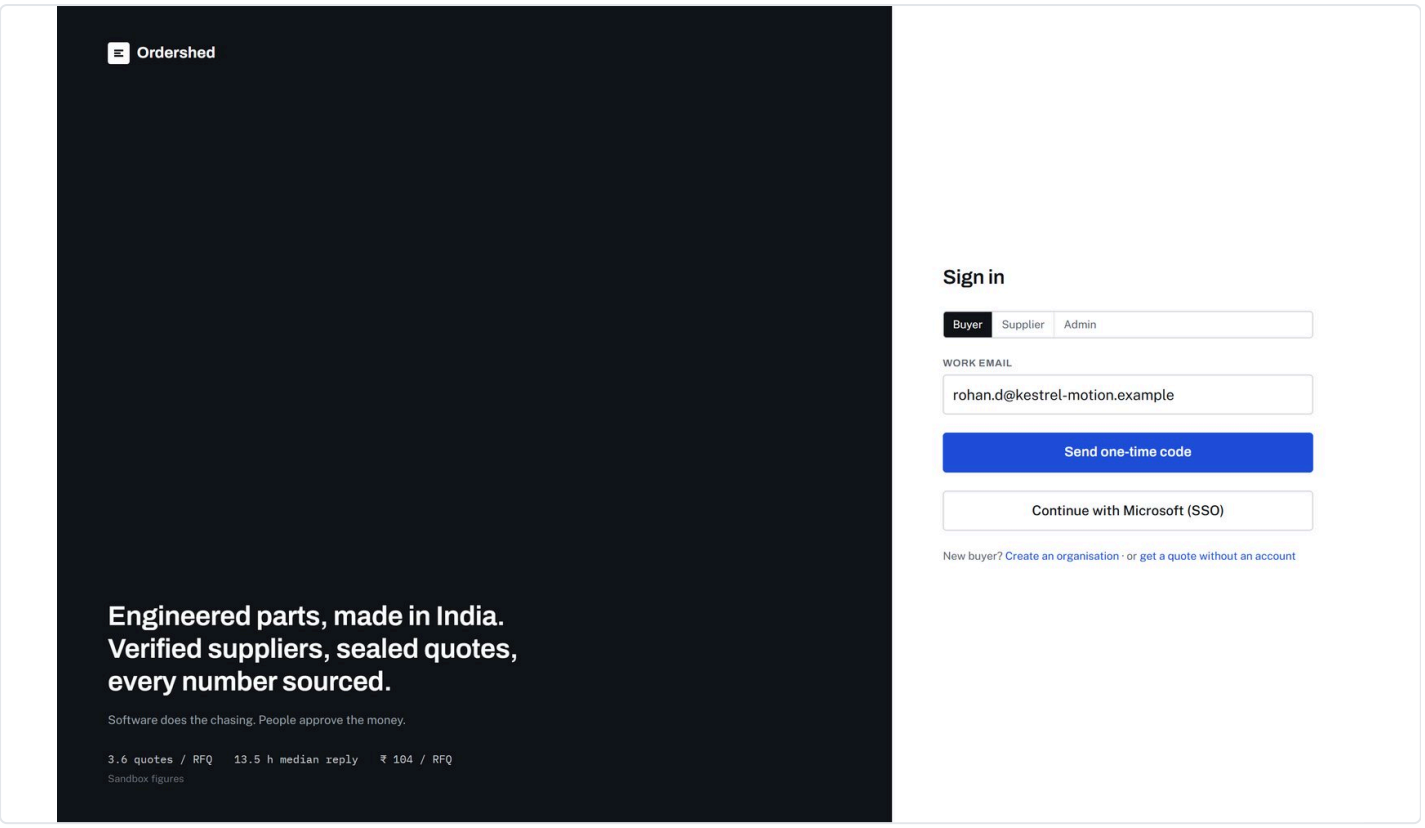

- Dense table: sort, filter, column chooser, saved layout, bulk select, export, keyboard
- Status chip (word + colour), source tag on every number
- "Proposed by AI" box with confidence and Approve / Edit
- Document flow, DoA strip, commitment card, sealed-bid hash, command bar

RULES BUILT INTO THE CODE

- Money is computed in code: normalised and landed cost, savings, 3-way match, DoA
- A number cannot render without its source Computed
- Nothing AI-drafted is sent without a person's tap
- Buyer name hidden from suppliers until award; floor price private; tier never changes rank

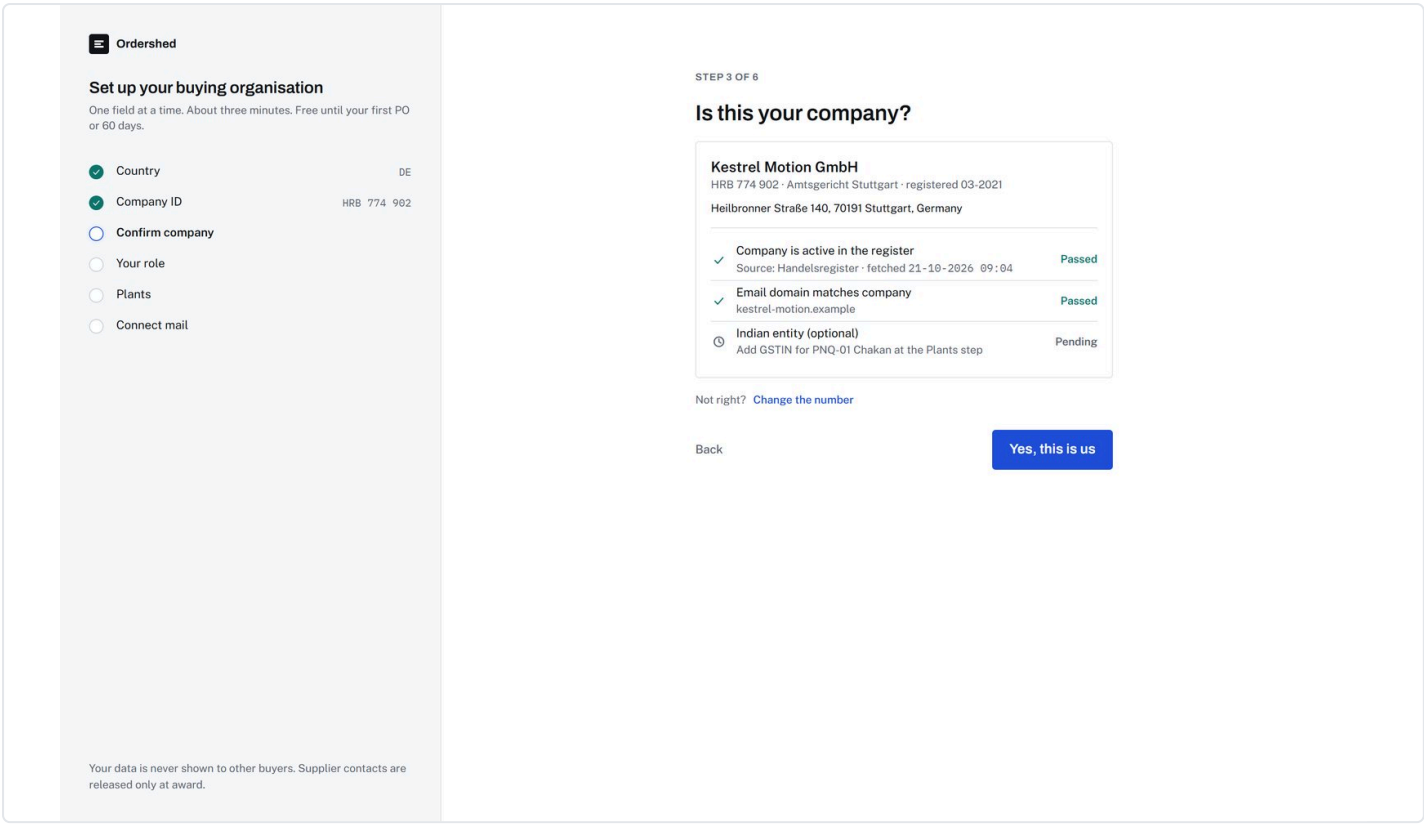

Screens

Select any screenshot to see it full size. Data is fictional sandbox data.

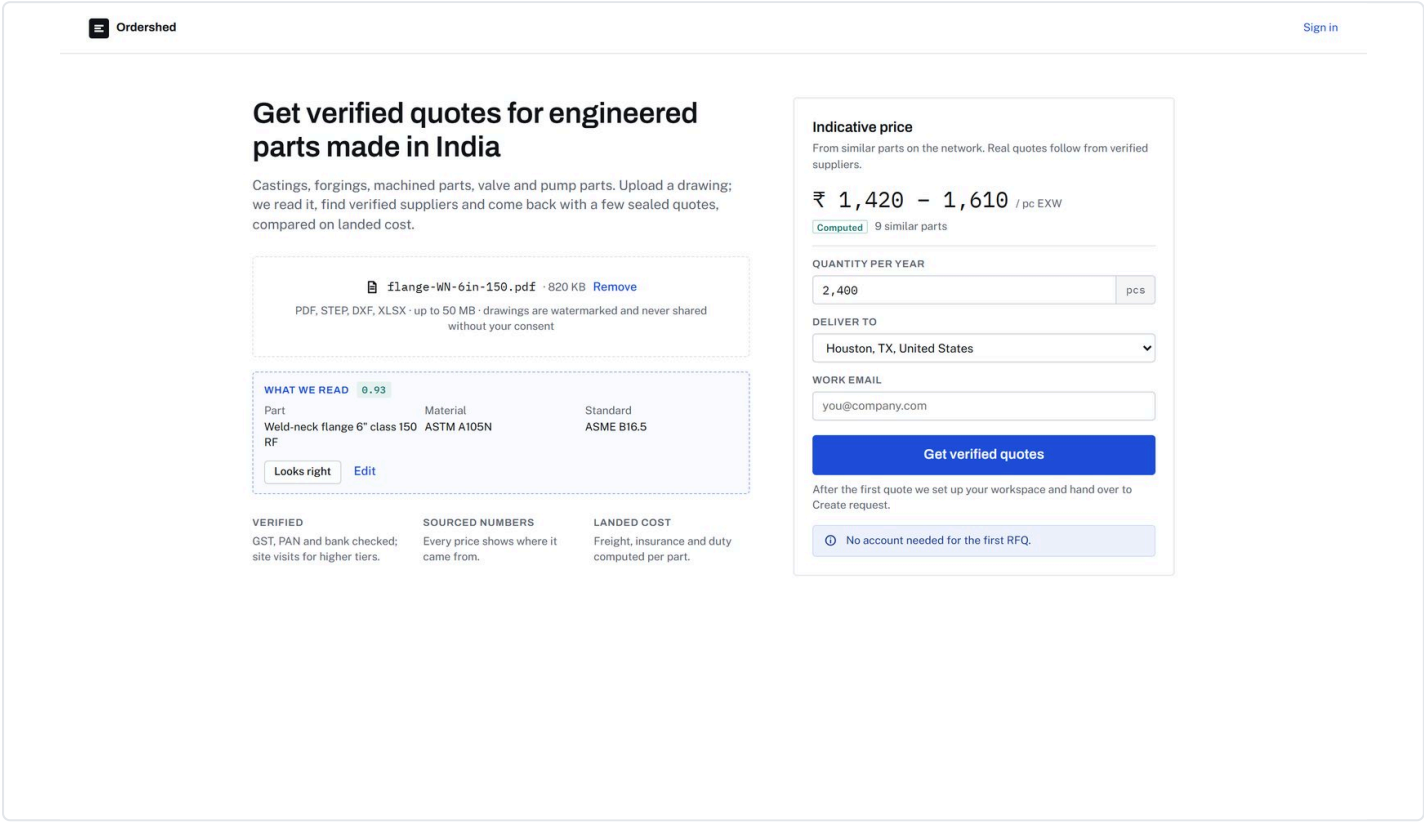

Sign in

Three roles, three methods: buyer email OTP or Microsoft SSO, supplier WhatsApp OTP with GSTIN as the org key, admin passkey.

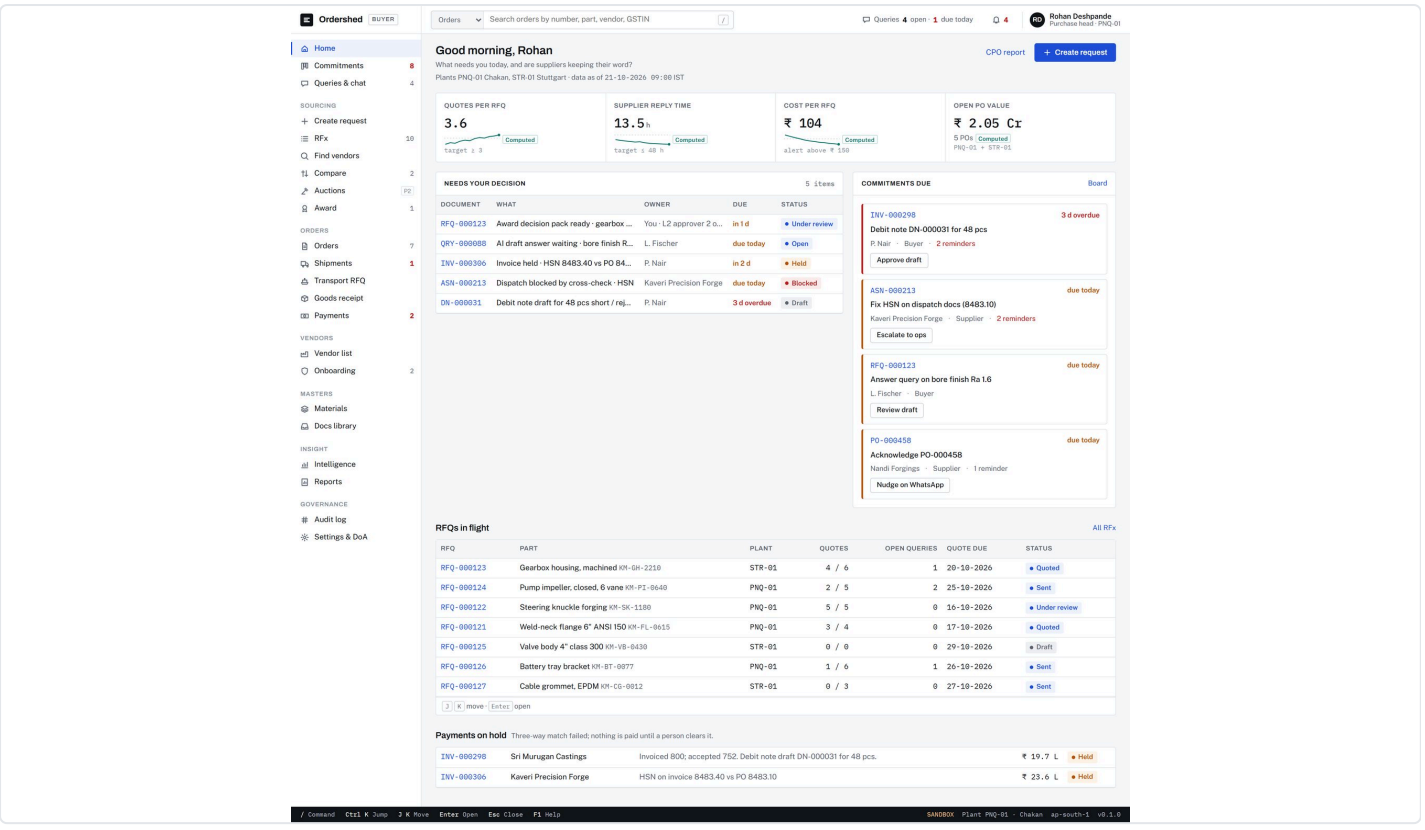

Buyer sign-up & KYB

One field at a time. The country picks the ID (GSTIN, Handelsregister, EIN, Companies House, UAE licence), then a register lookup confirms the company.

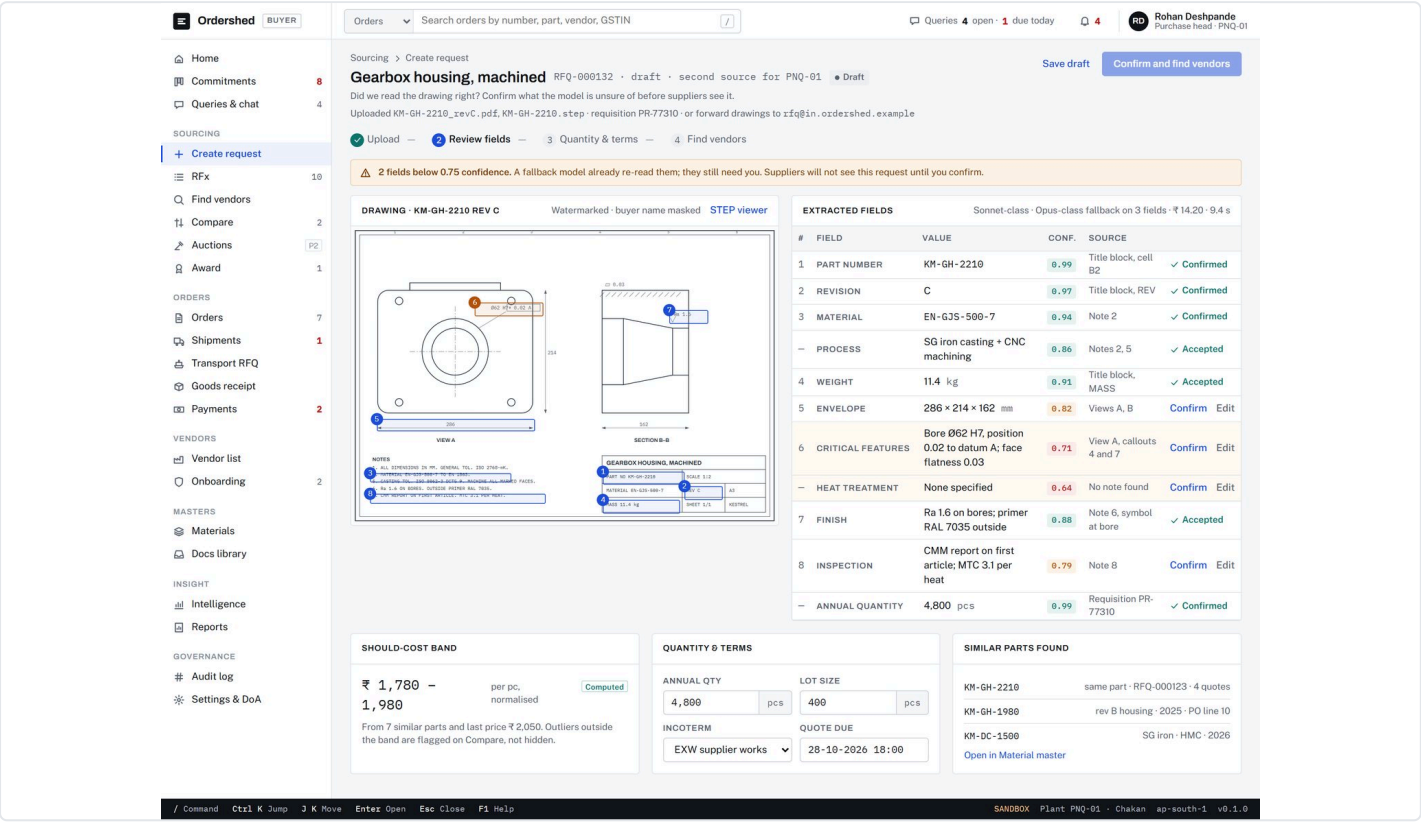

Get a quote

No account needed. Upload a drawing, see what the AI read, get an indicative band with its source, then hand over to Create request.

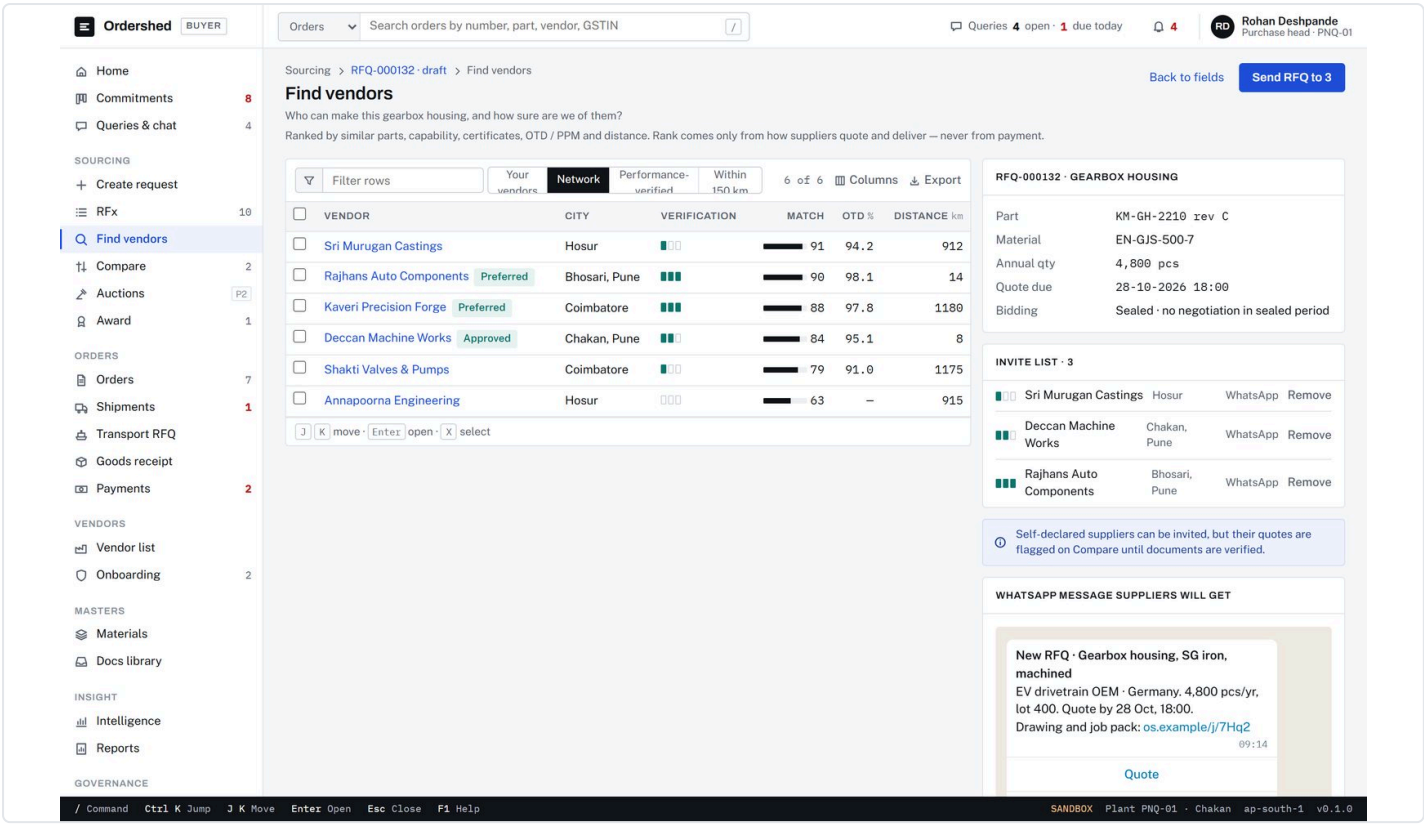

Home

What needs me today? The three key numbers, decisions waiting, commitments due, RFQs in flight, payments on hold.

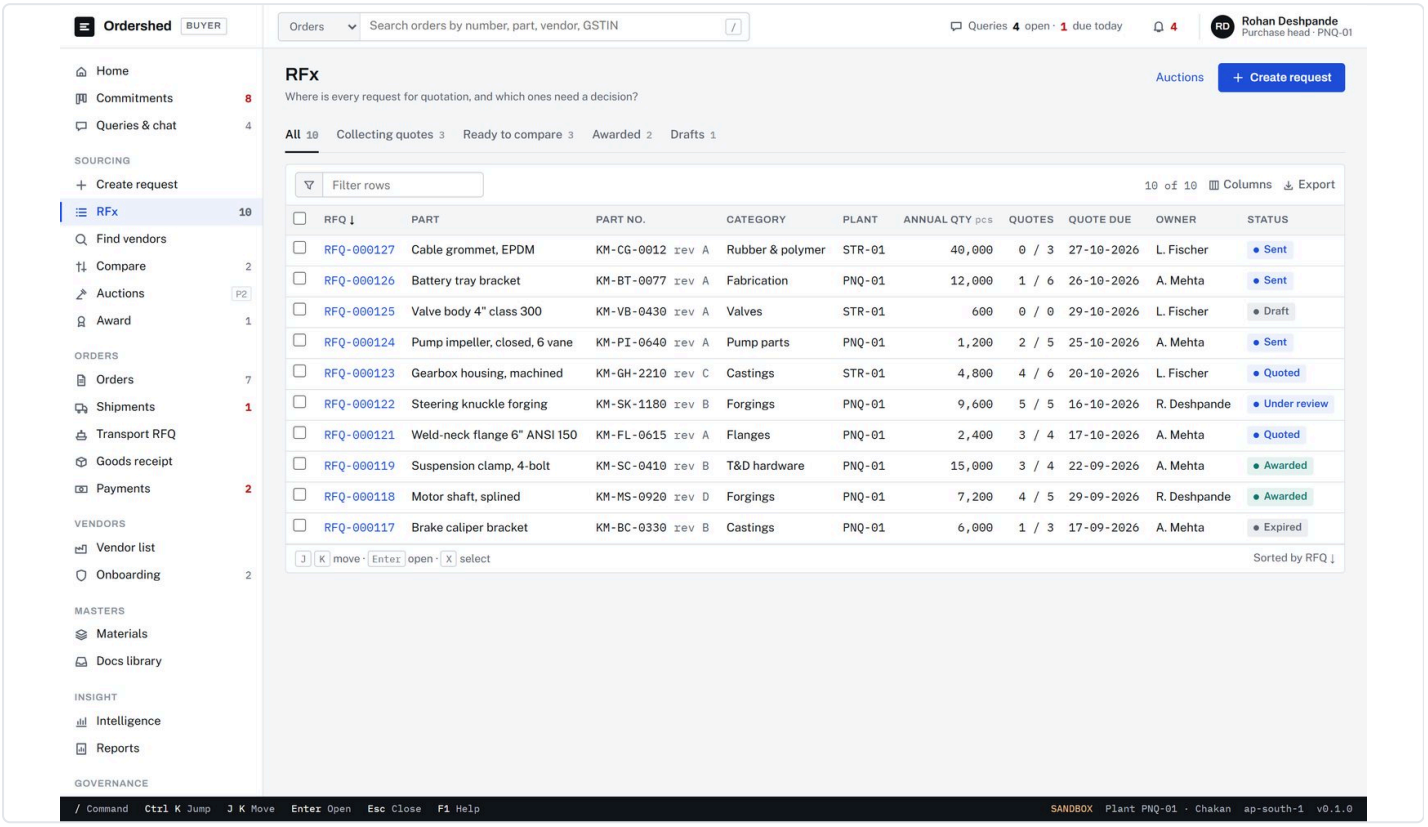

Create request

Drawing on the left with numbered source spans; extracted fields on the right with confidence. Fields below 0.75 must be confirmed before suppliers see anything.

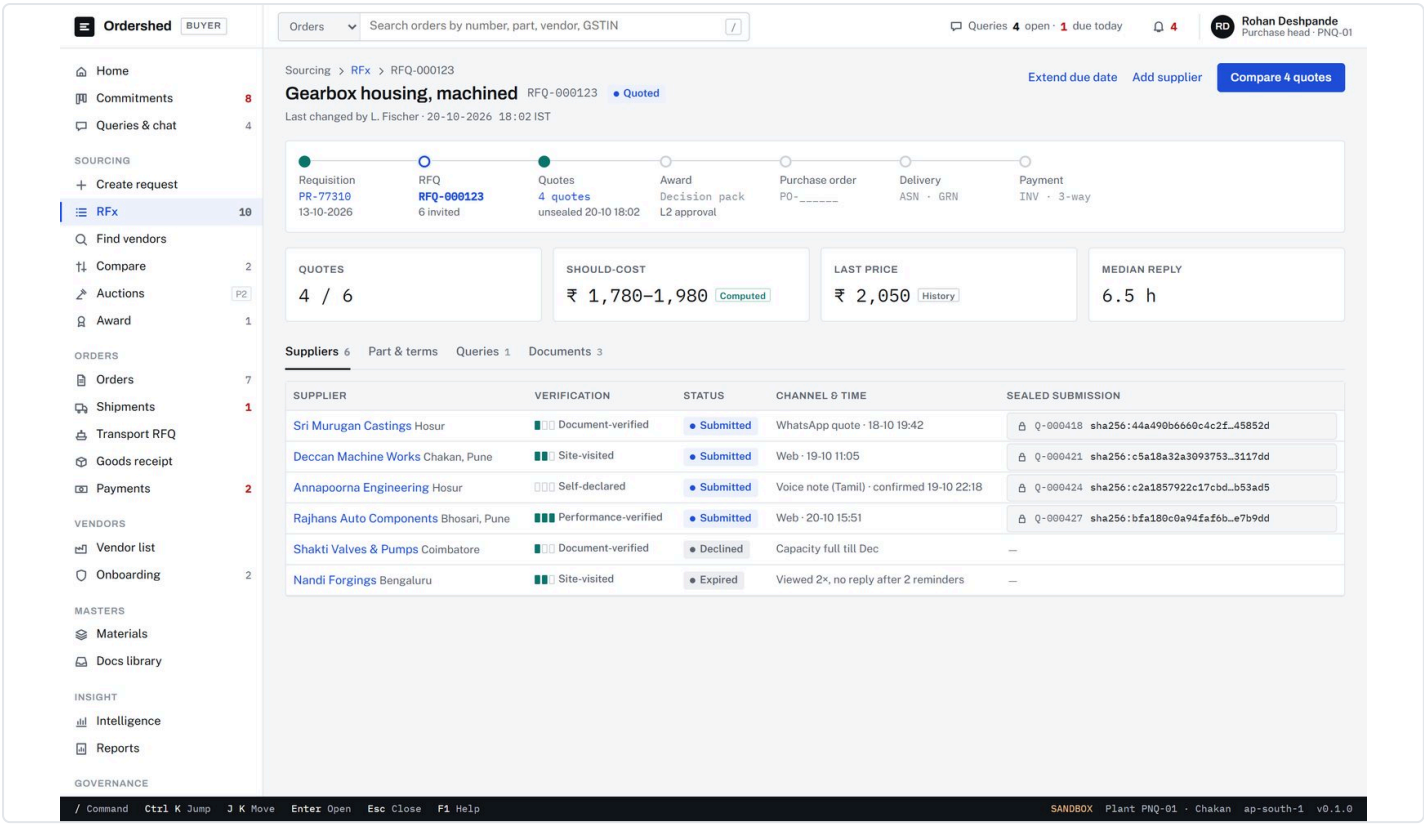

Find vendors

Ranked by similar parts, capability, OTD and distance. Verification tier kept separate from rank. Preview of the WhatsApp RFQ, buyer name hidden.

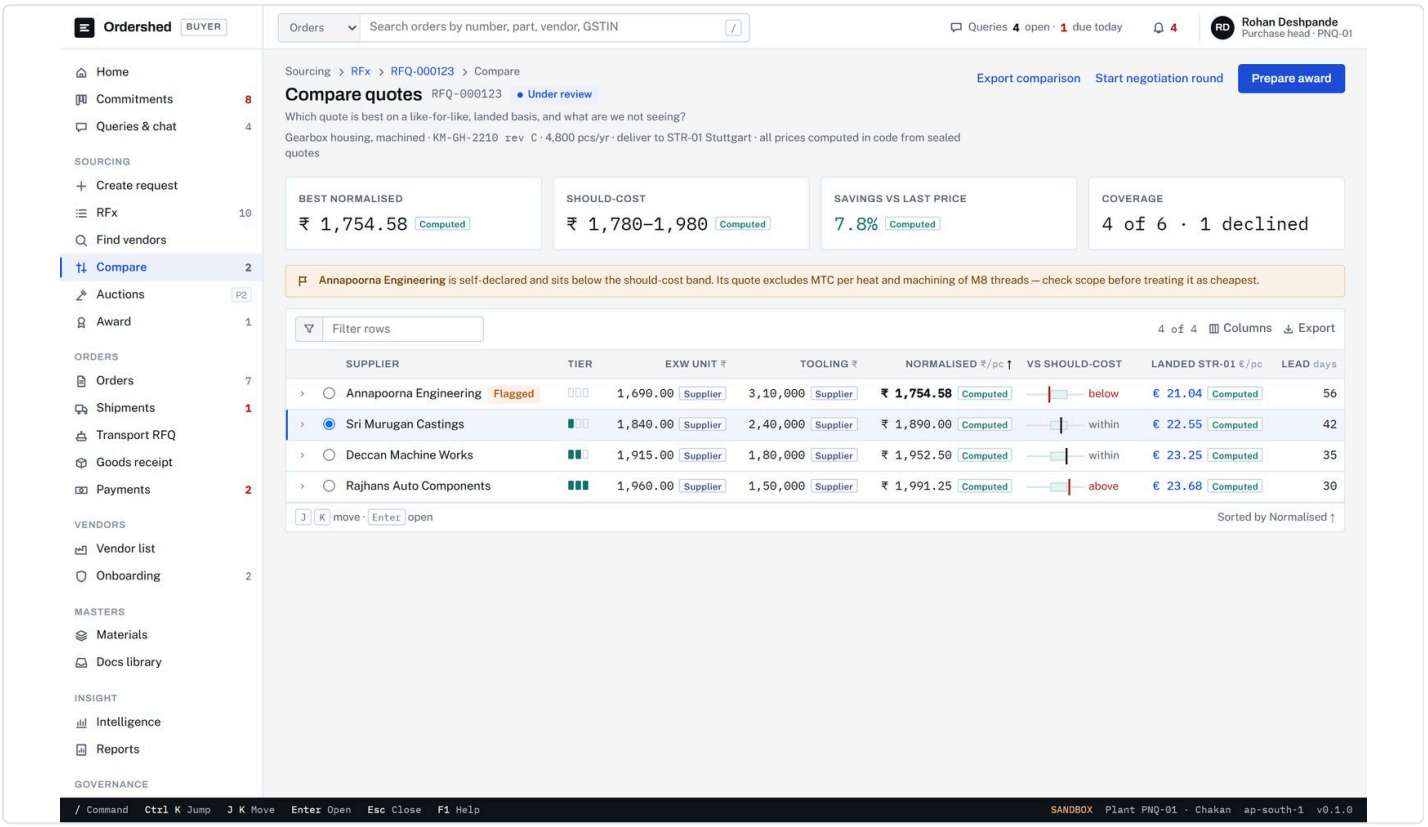

RFx

Every RFQ by status, with bulk reminders and due-date changes.

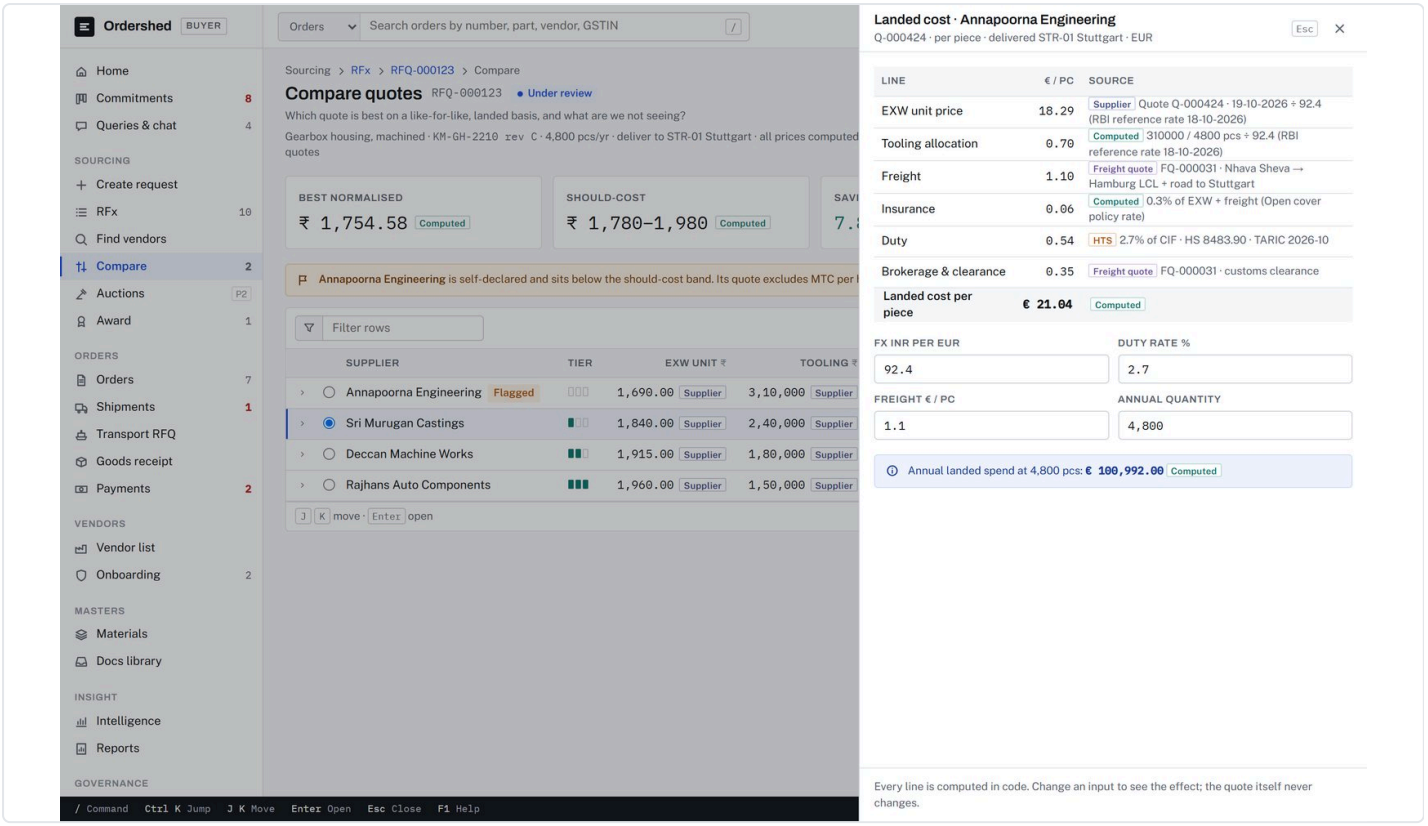

RFQ view

Document flow, supplier status and a sealed hash per quote.

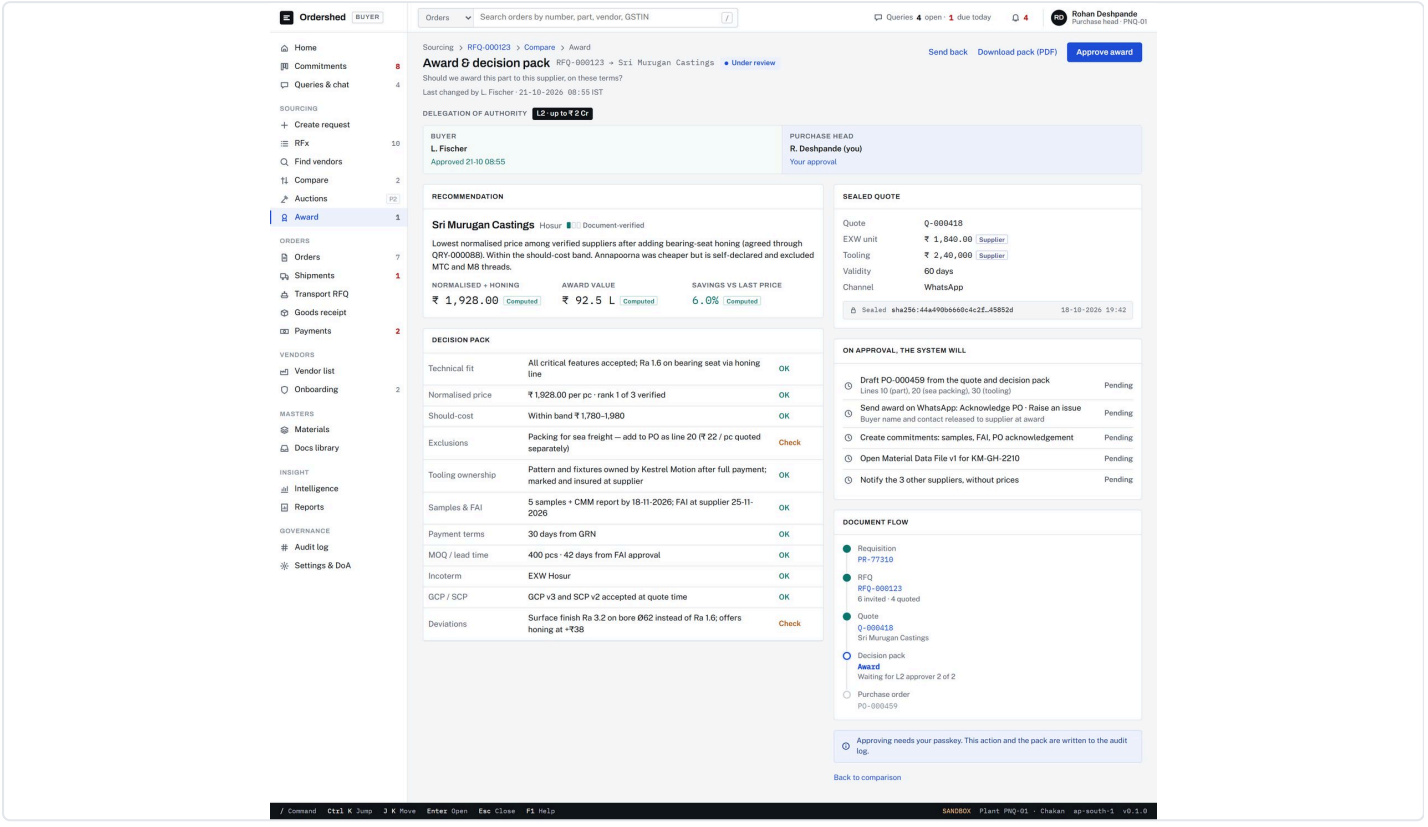

Compare quotes

EXW, tooling and normalised price, each source-tagged, against the should-cost band. Self-declared and outlier quotes are flagged, not hidden.

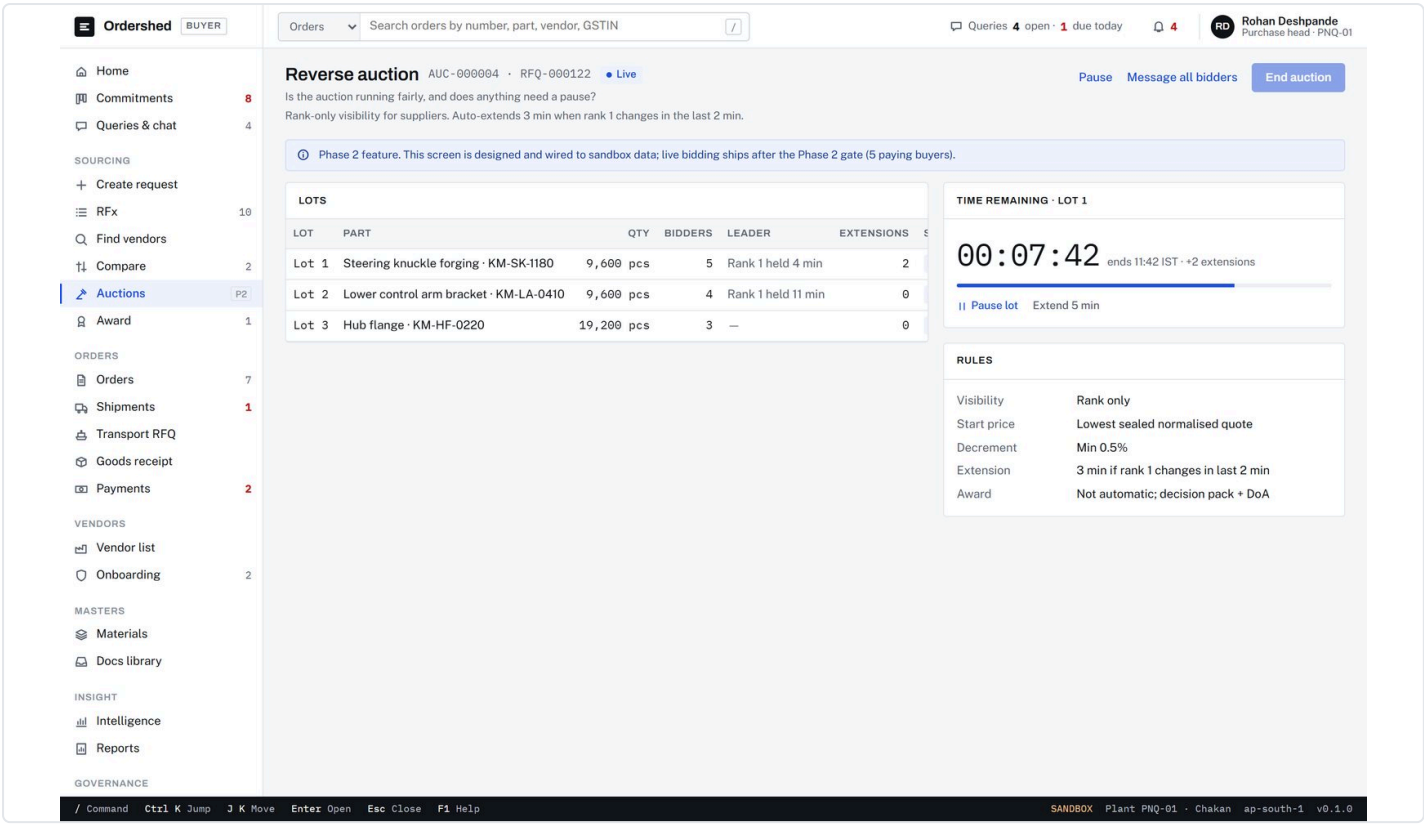

Landed-cost drawer

Landed cost to Stuttgart in EUR. Every line shows its source: supplier quote, freight quote, HS duty rate, or computed.

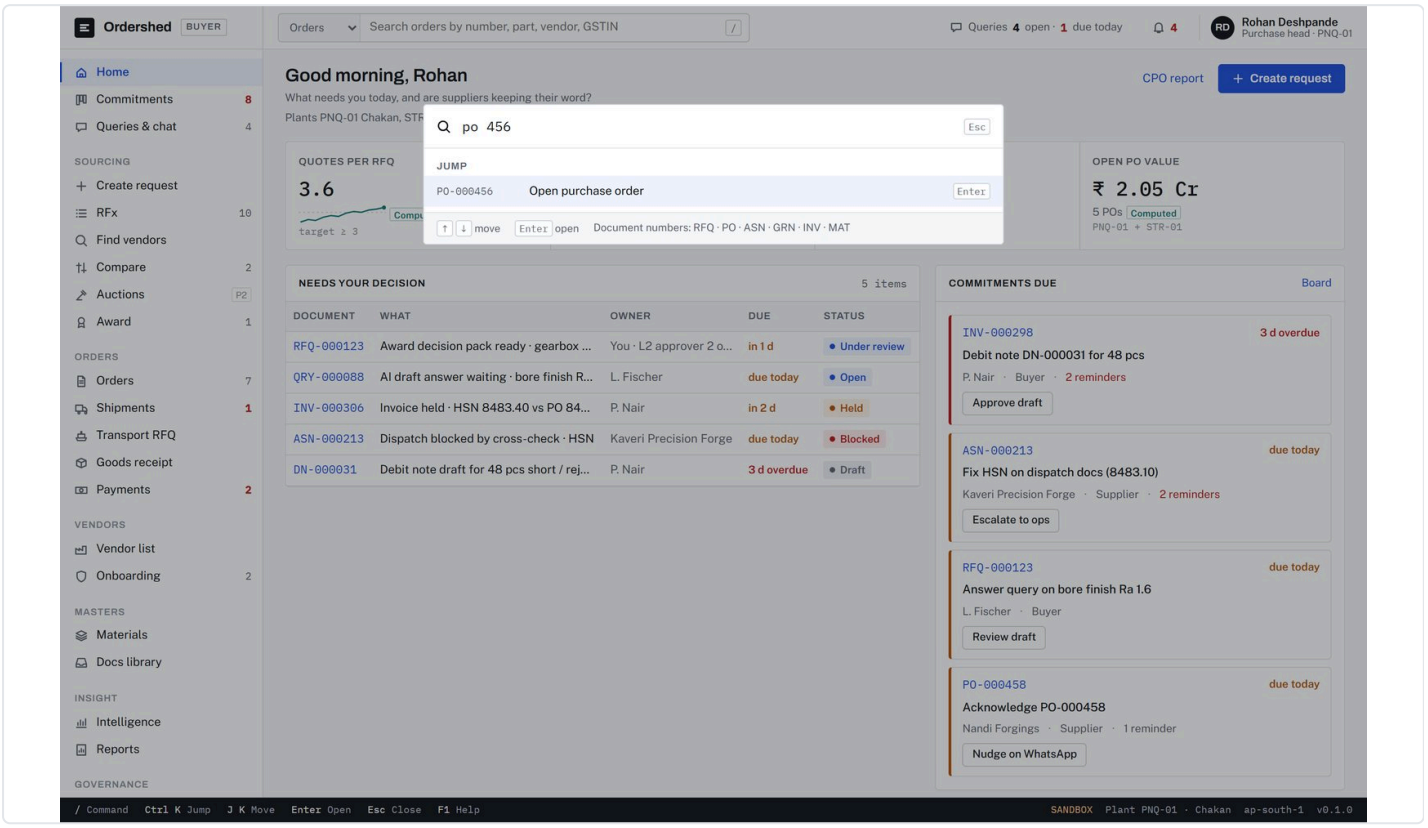

Award & decision pack

Recommendation, full decision-pack checklist, Delegation of Authority strip (L2: Buyer then Purchase head) and what happens on approval.

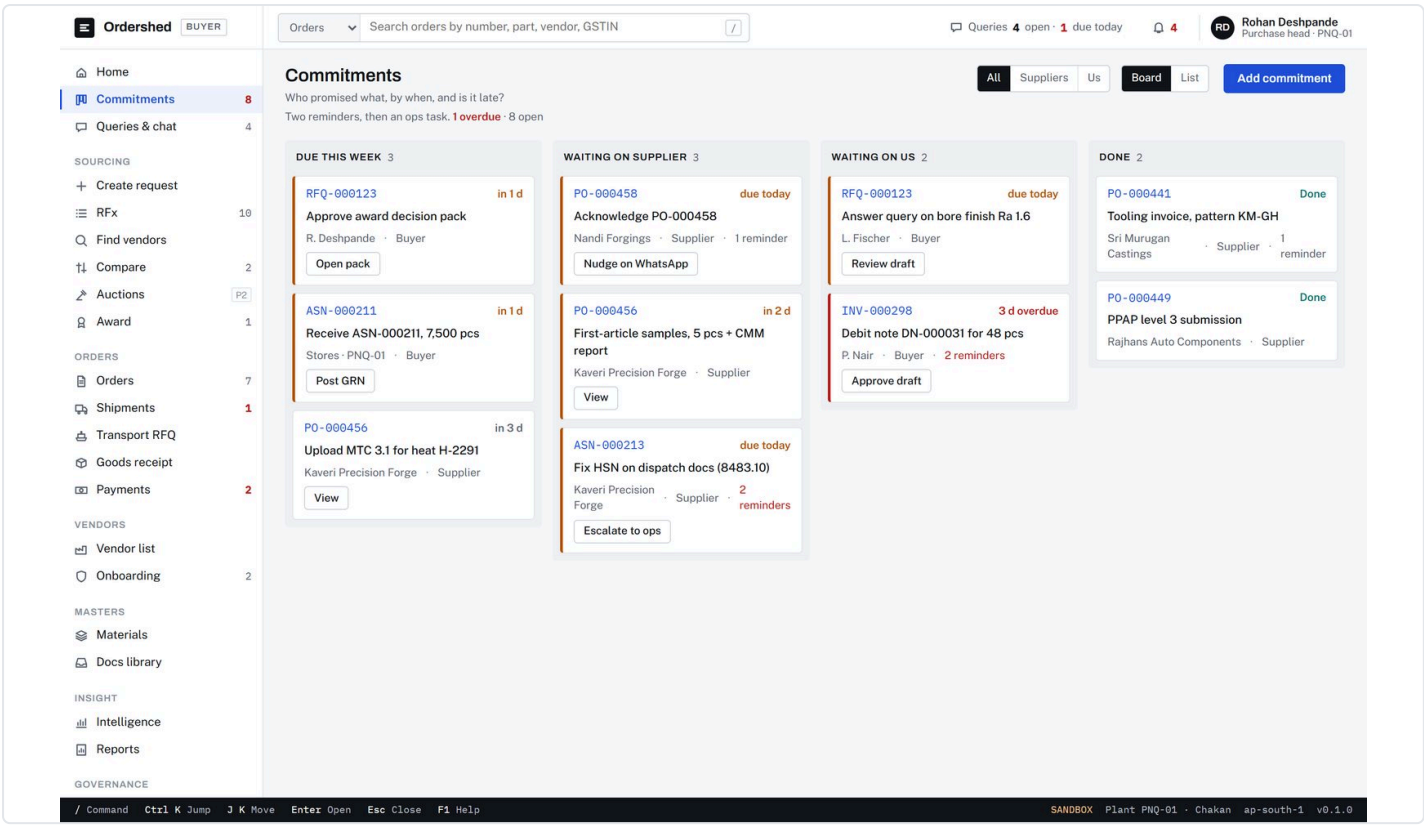

Reverse auction

Phase 2. Rank-only lots, auto-extension, pause.

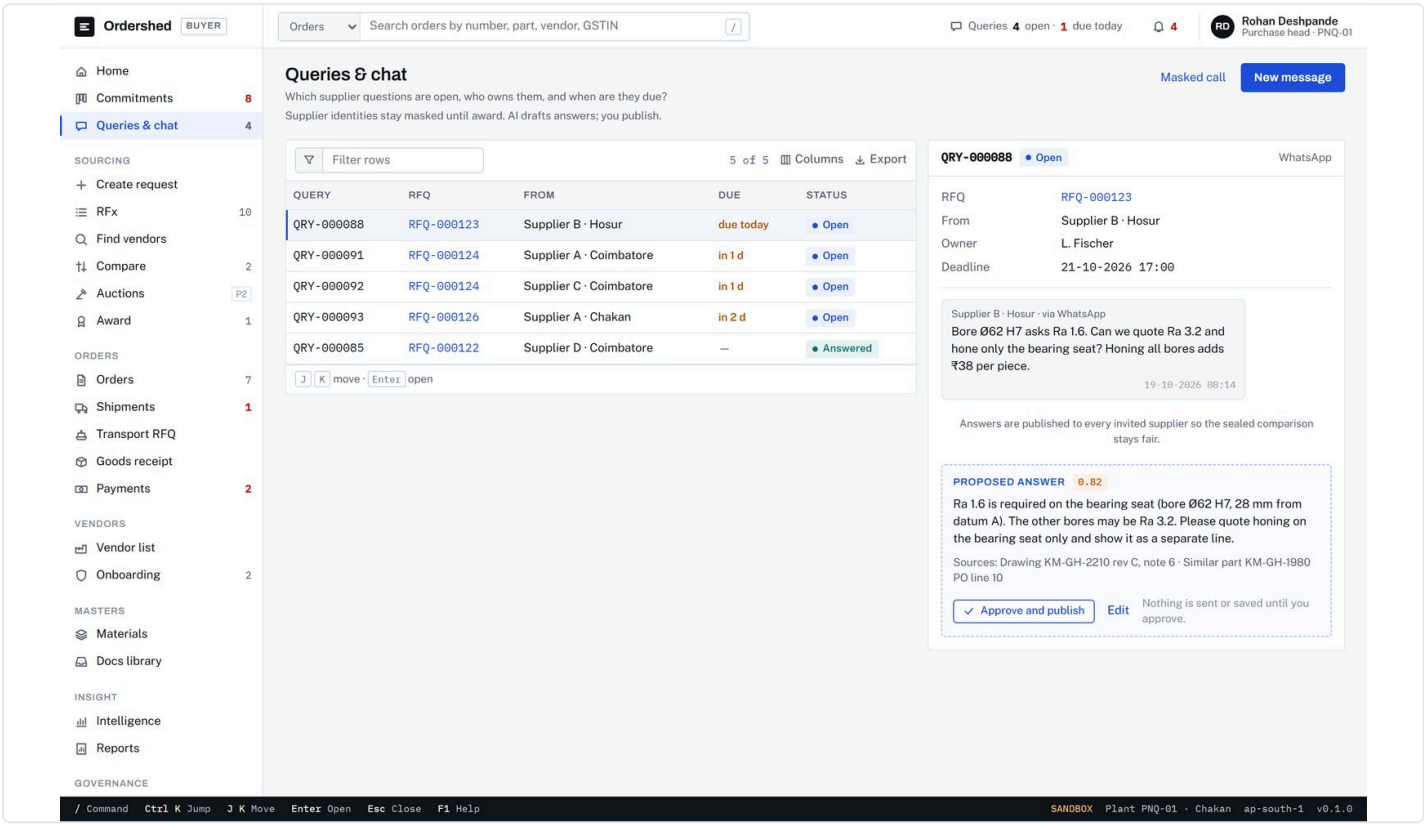

Command bar

Press / and type PO 456, RFQ 123, vendor hosur or new rfq, like SAP transaction codes.

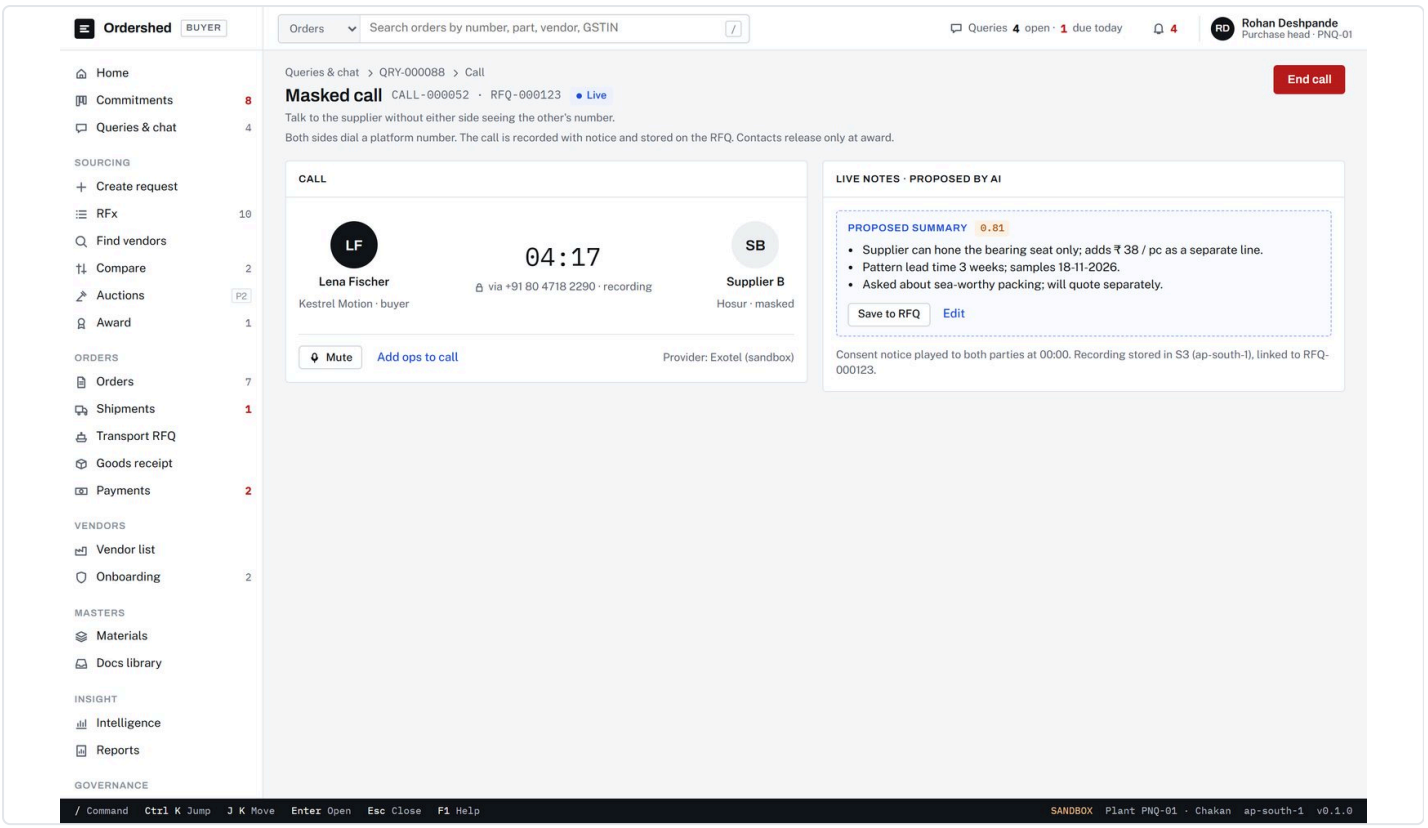

Commitments

Every promise is a card with owner and due date. Two reminders, then an ops task.

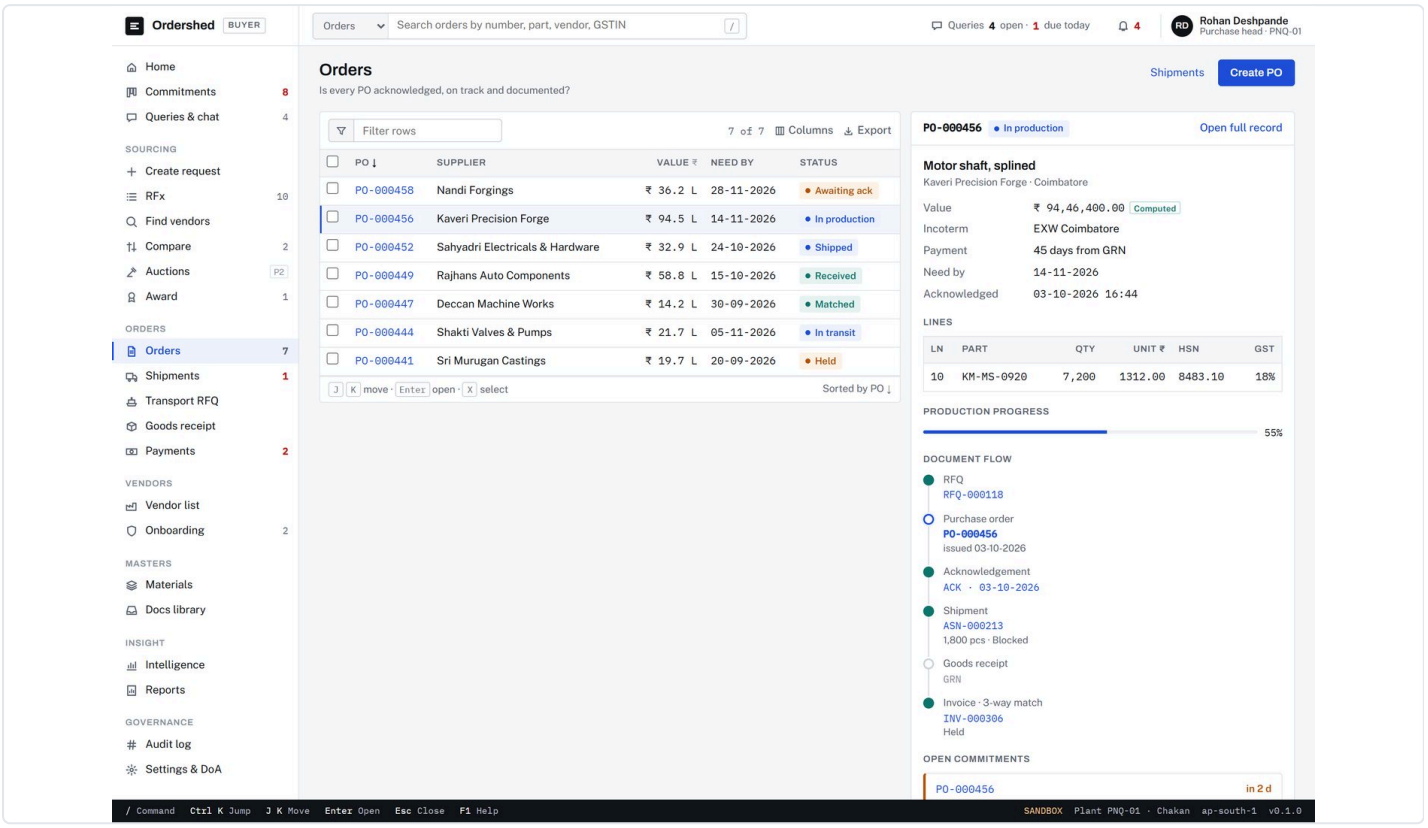

Queries & chat

Supplier questions with owner and deadline. AI drafts the answer; the buyer approves before it is published to all invited suppliers.

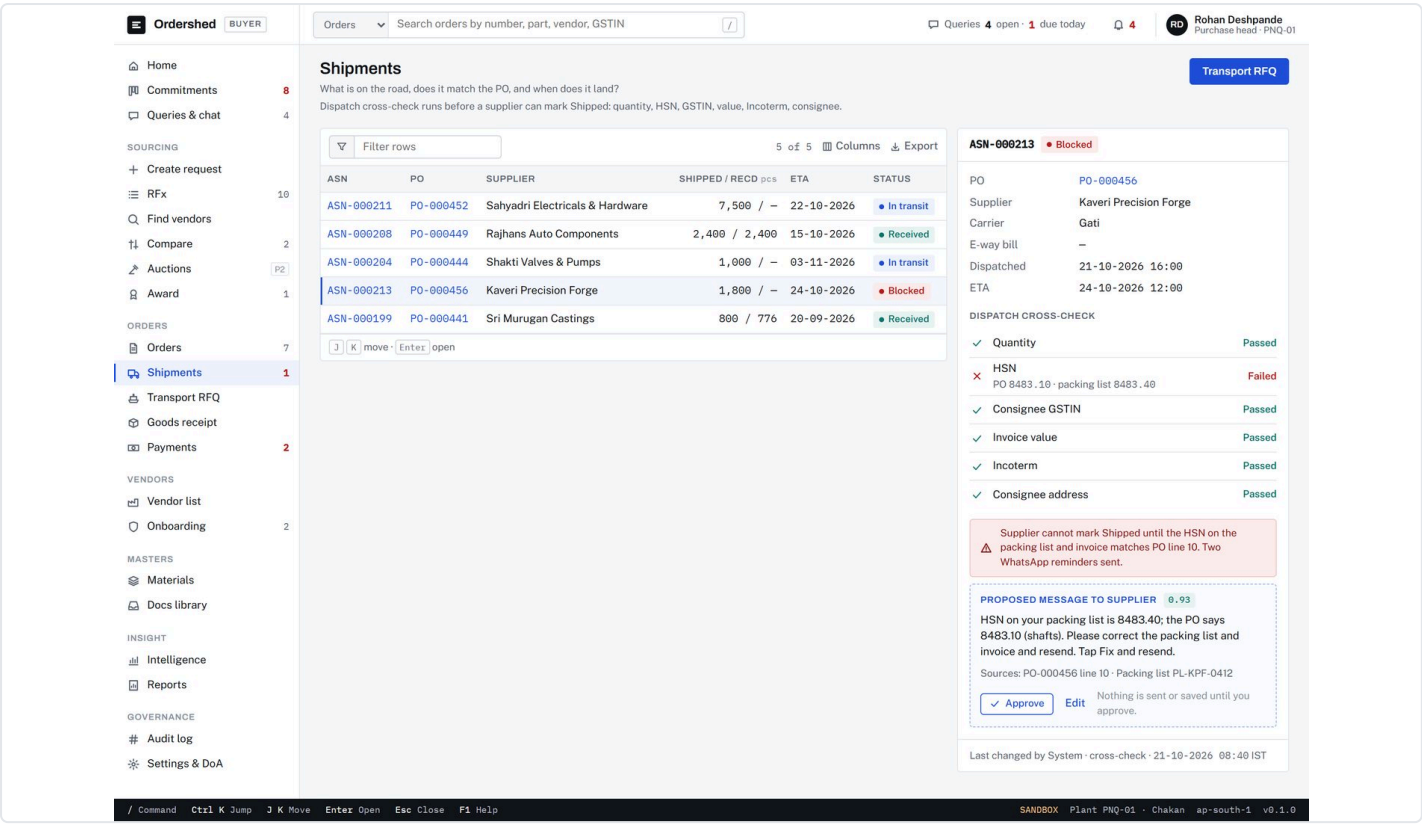

Masked call

Both sides dial a platform number; recorded with notice; AI summary waits for approval.

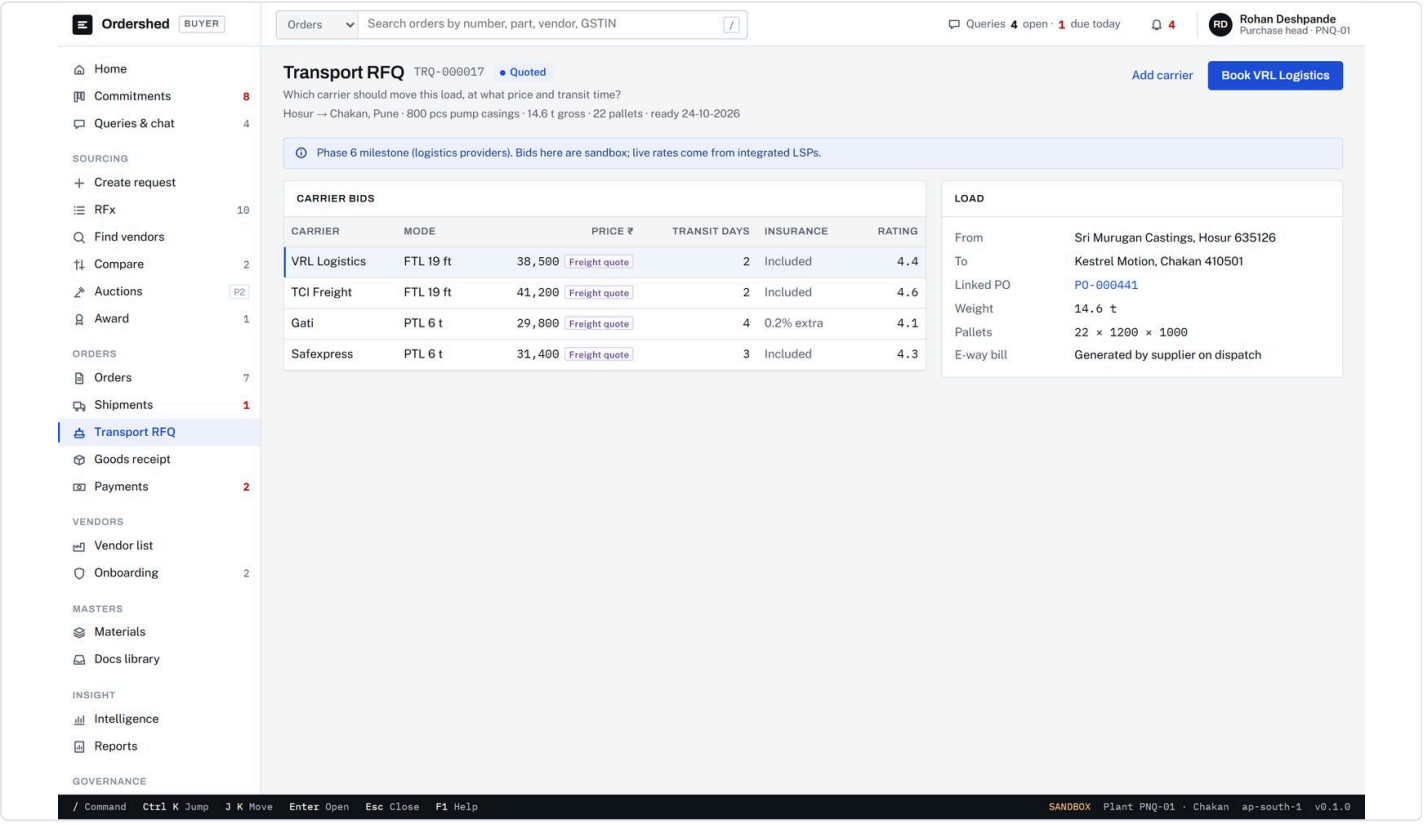

Orders

List and detail side by side. PO lines with HSN and GST, progress, document flow RFQ → PO → ACK → ASN → GRN → INV.

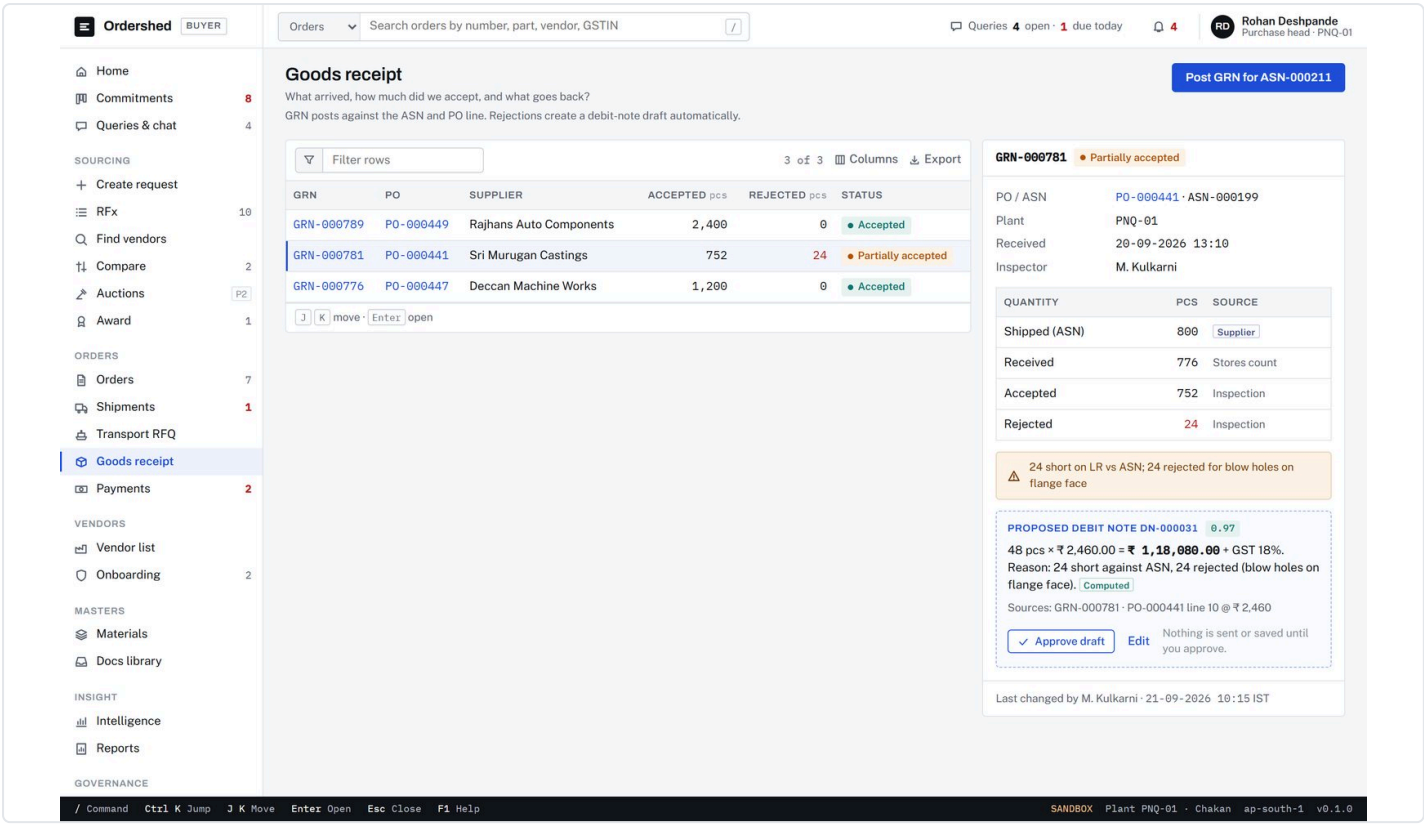

Shipments

Dispatch cross-check before Shipped: quantity, HSN, GSTIN, value, Incoterm, consignee. A blocked example with an AI-drafted fix.

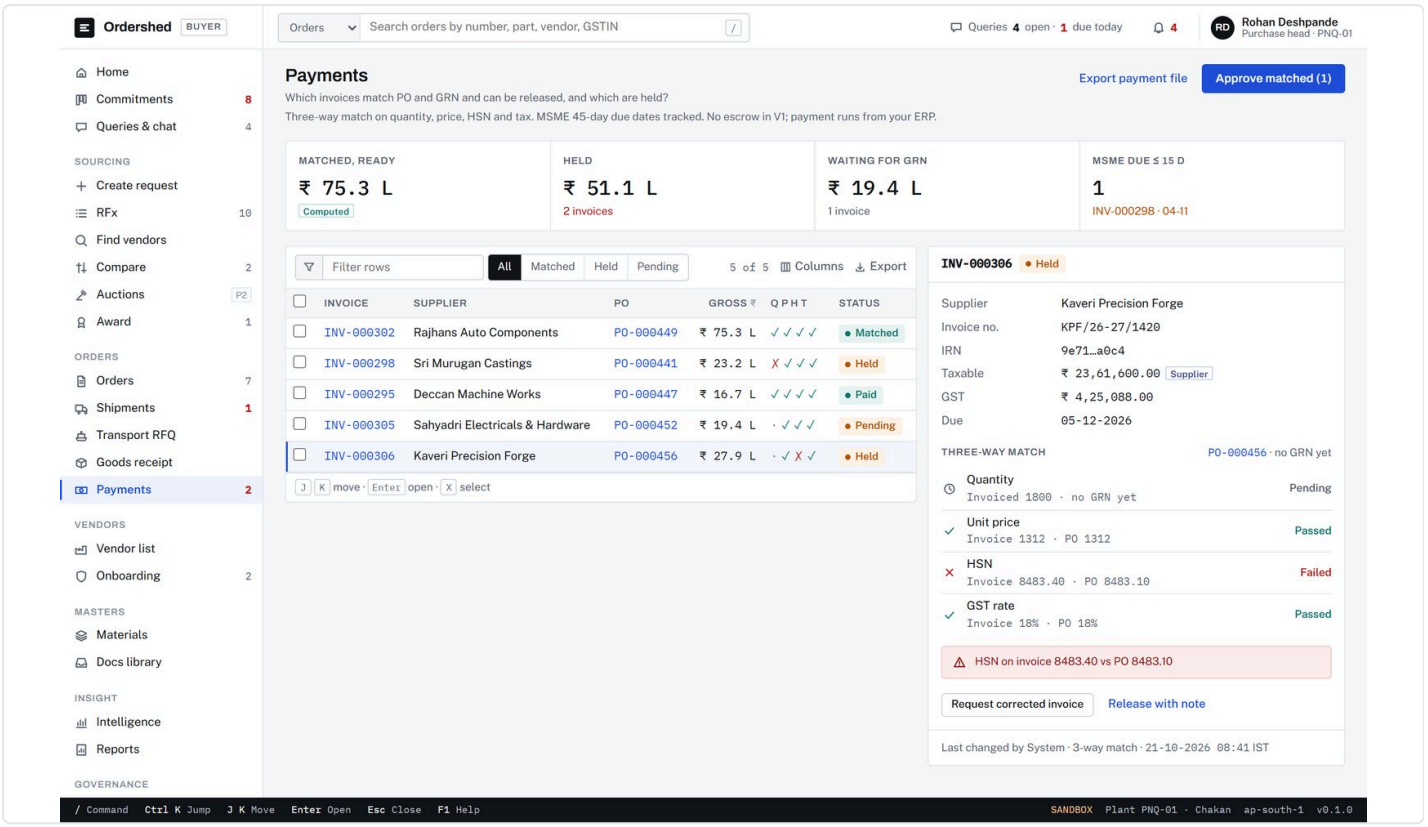

Transport RFQ

Carrier bids with freight source tags.

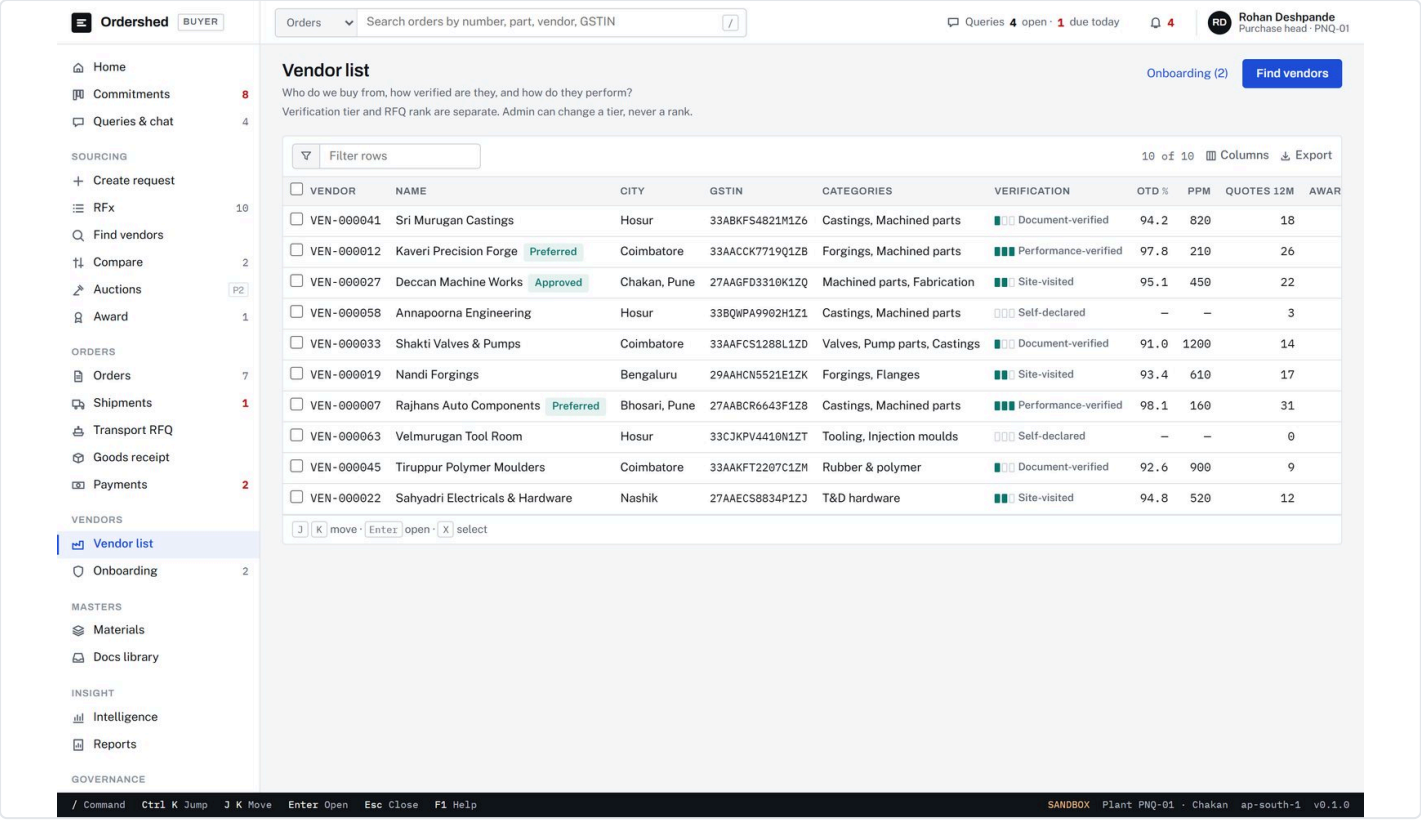

Goods receipt

Shipped, received, accepted, rejected; the debit note is drafted automatically.

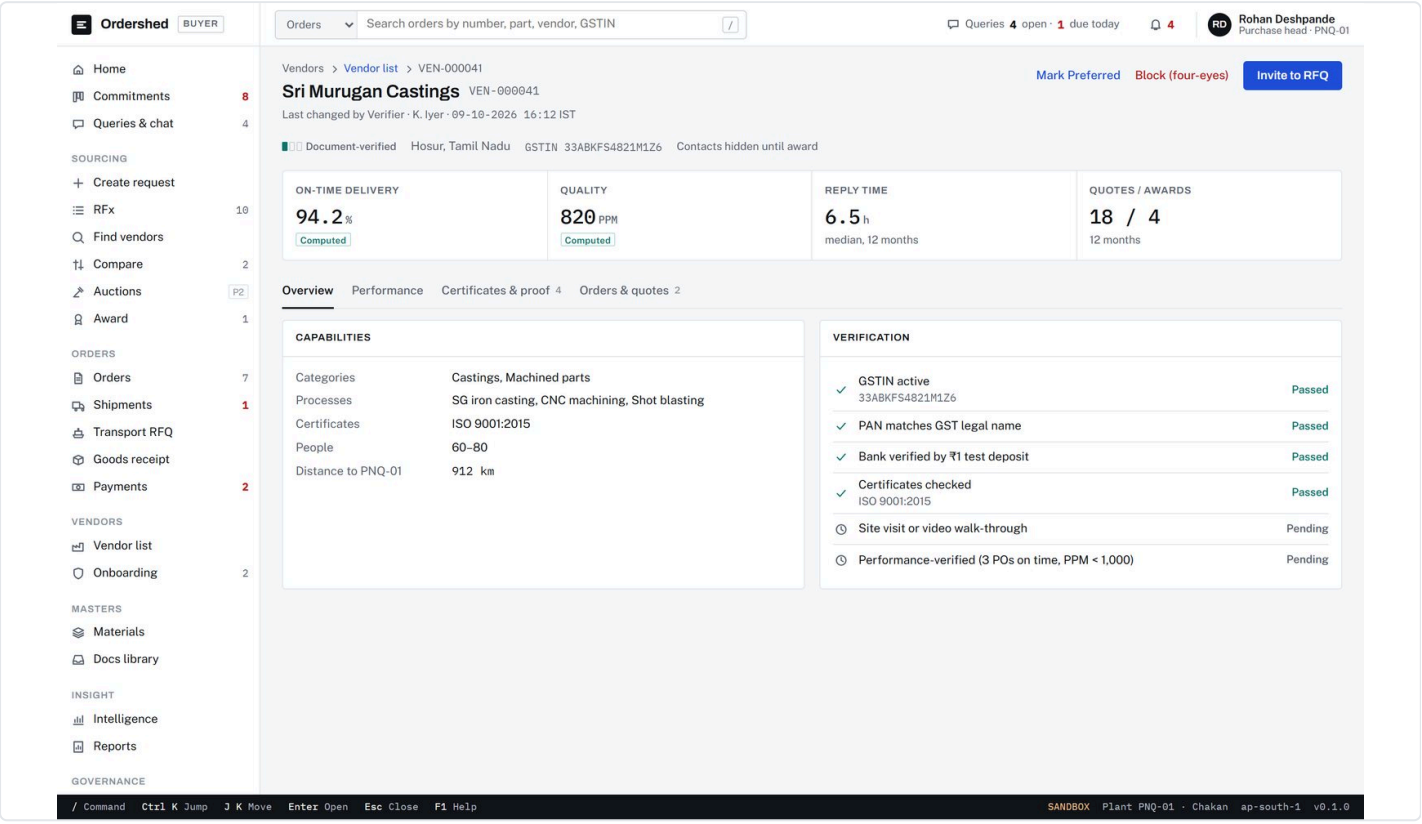

Payments

Three-way match of PO, GRN and invoice on quantity, price, HSN and tax, computed in code. Held invoices and MSME due dates.

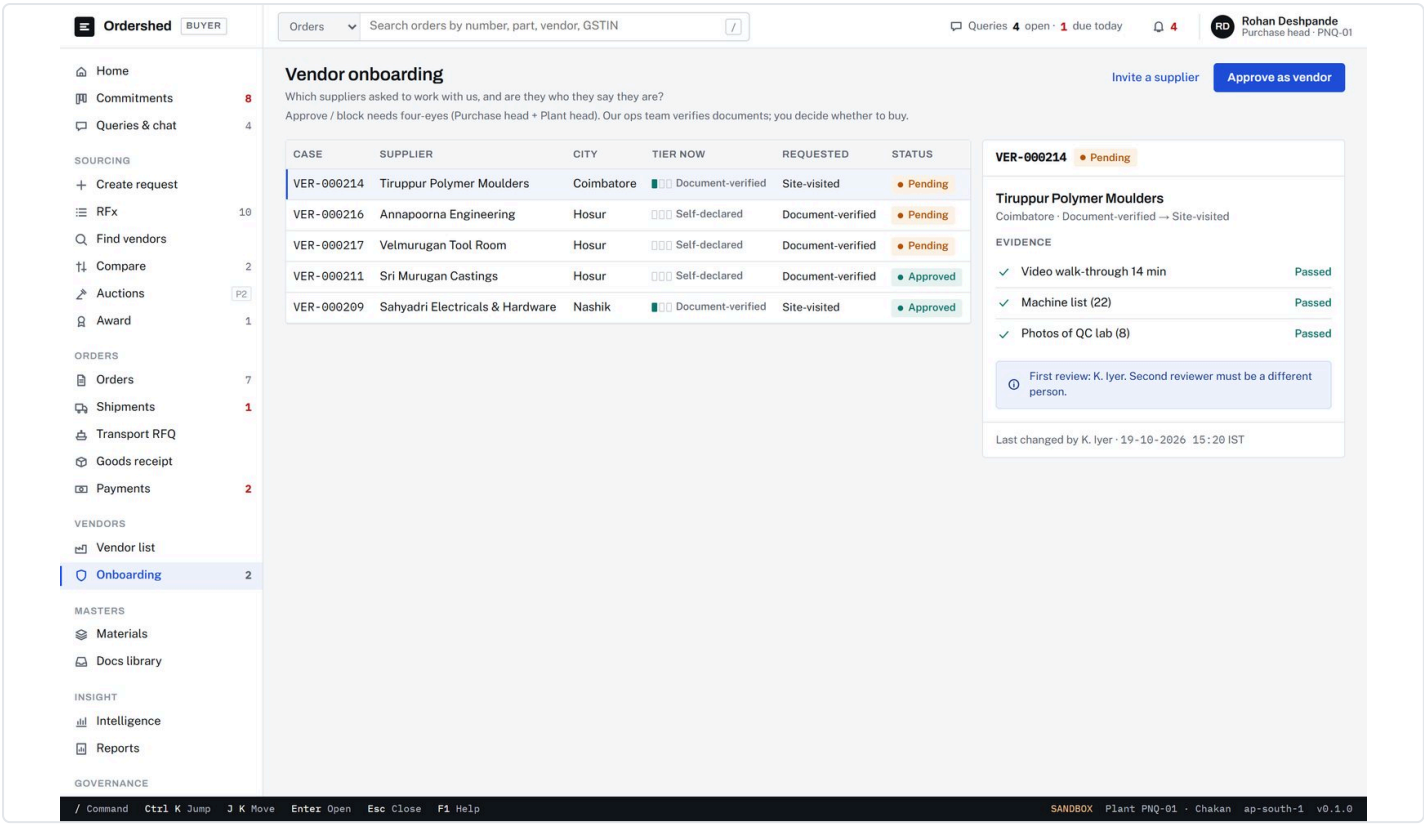

Vendor list

Verification tier, OTD, PPM, quotes and awards.

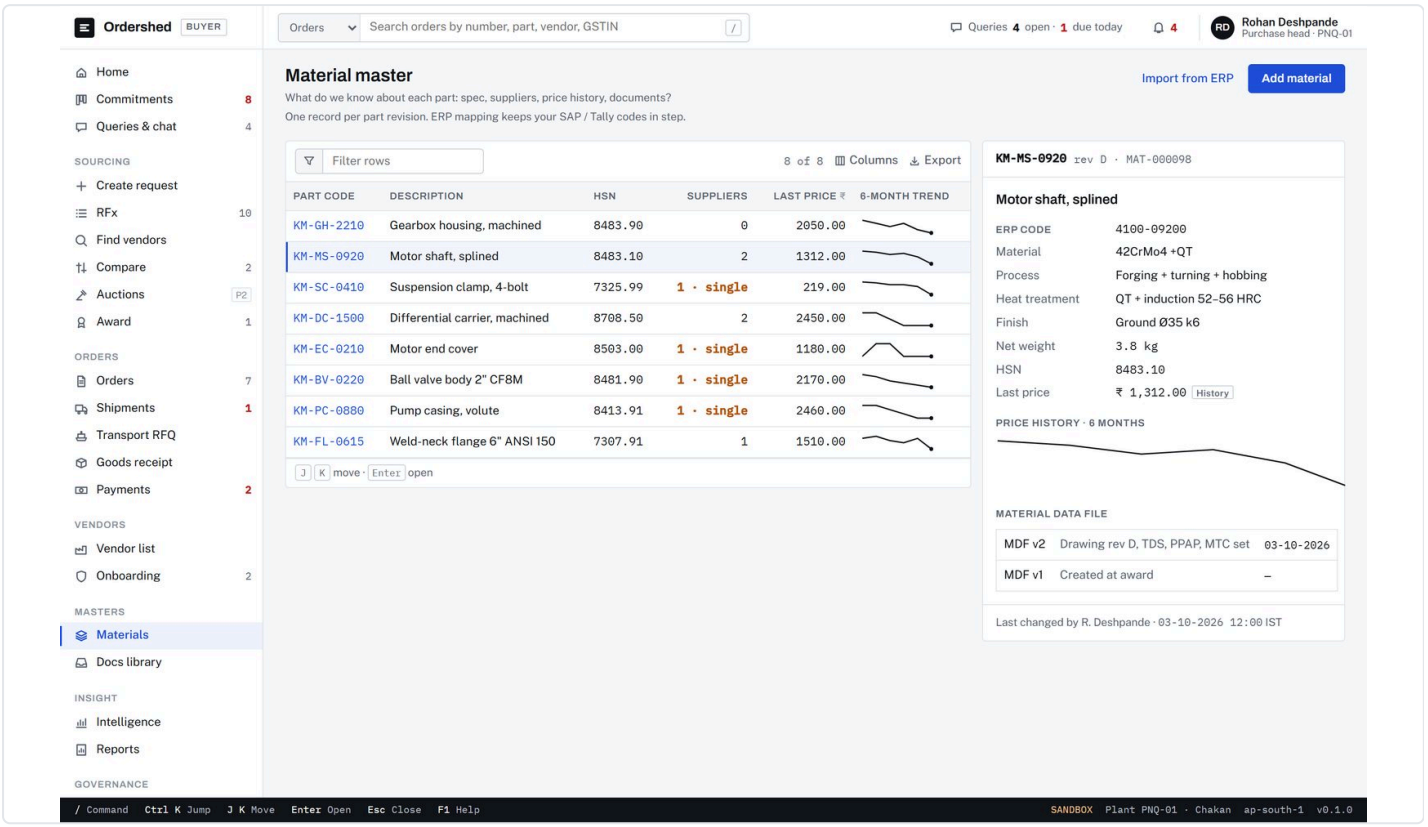

Vendor view

Performance from GRNs, verification checklist, certificates; contacts hidden until award.

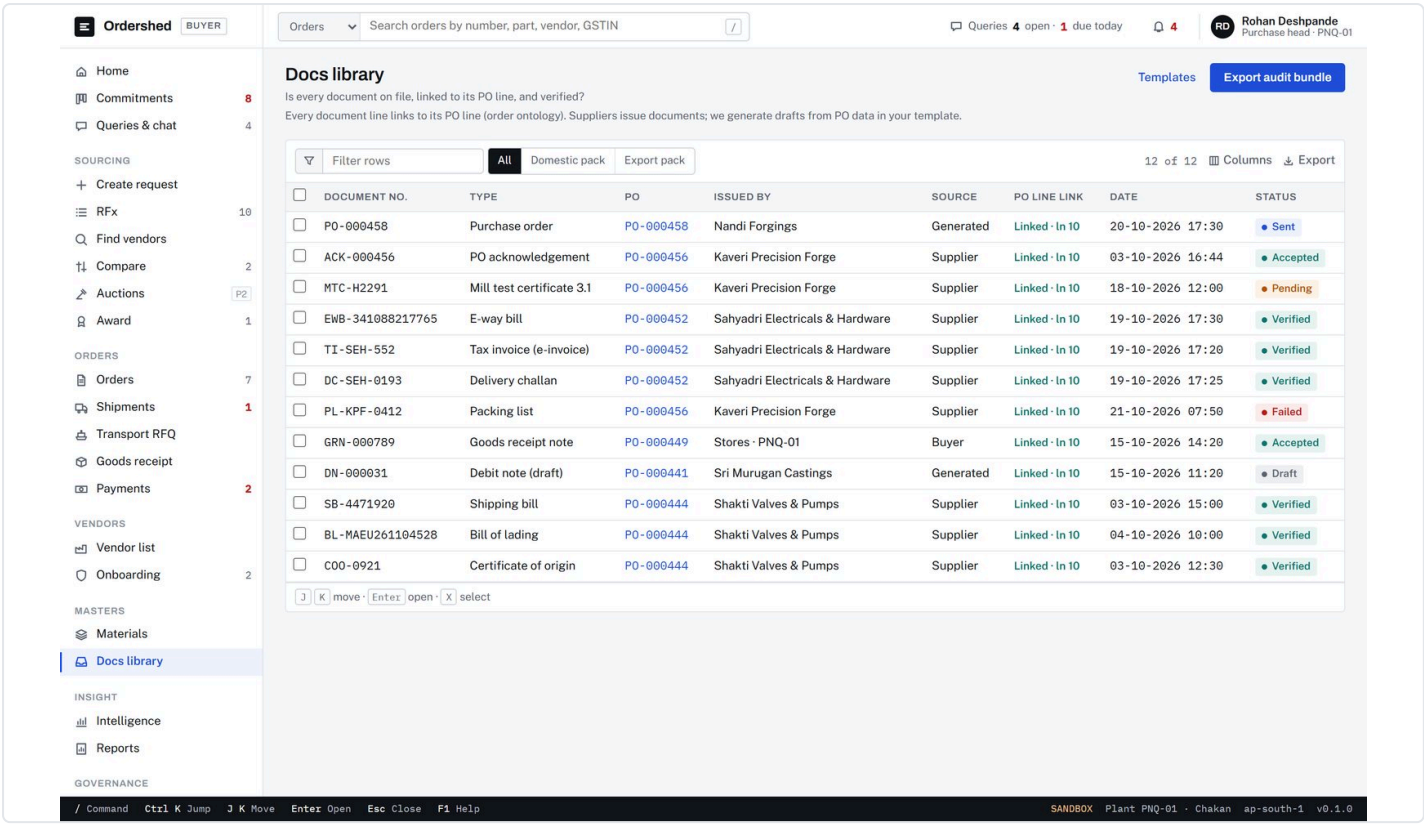

Vendor onboarding

Evidence and four-eyes approval.

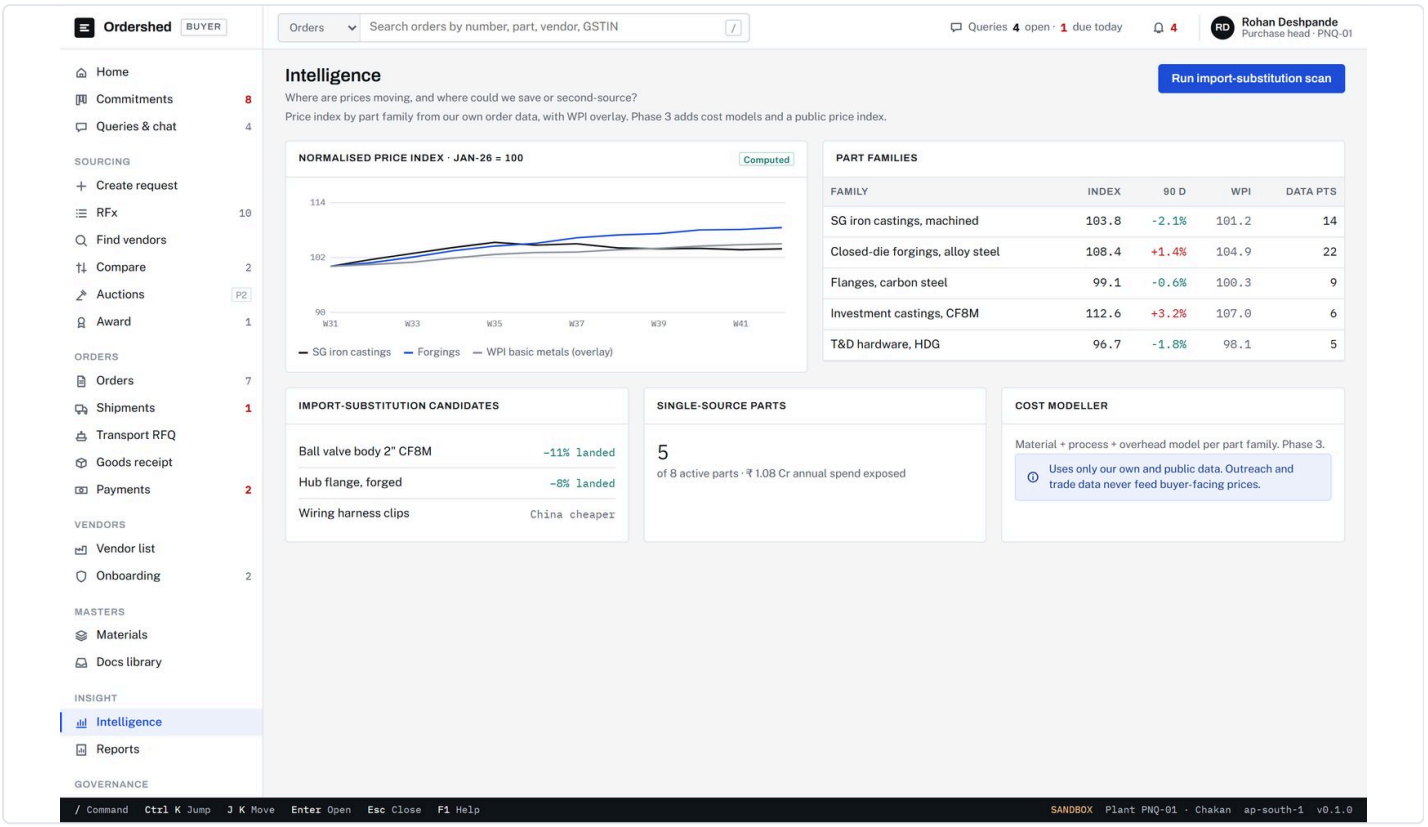

Material master

ERP mapping, price history, single-source flag, Material Data File.

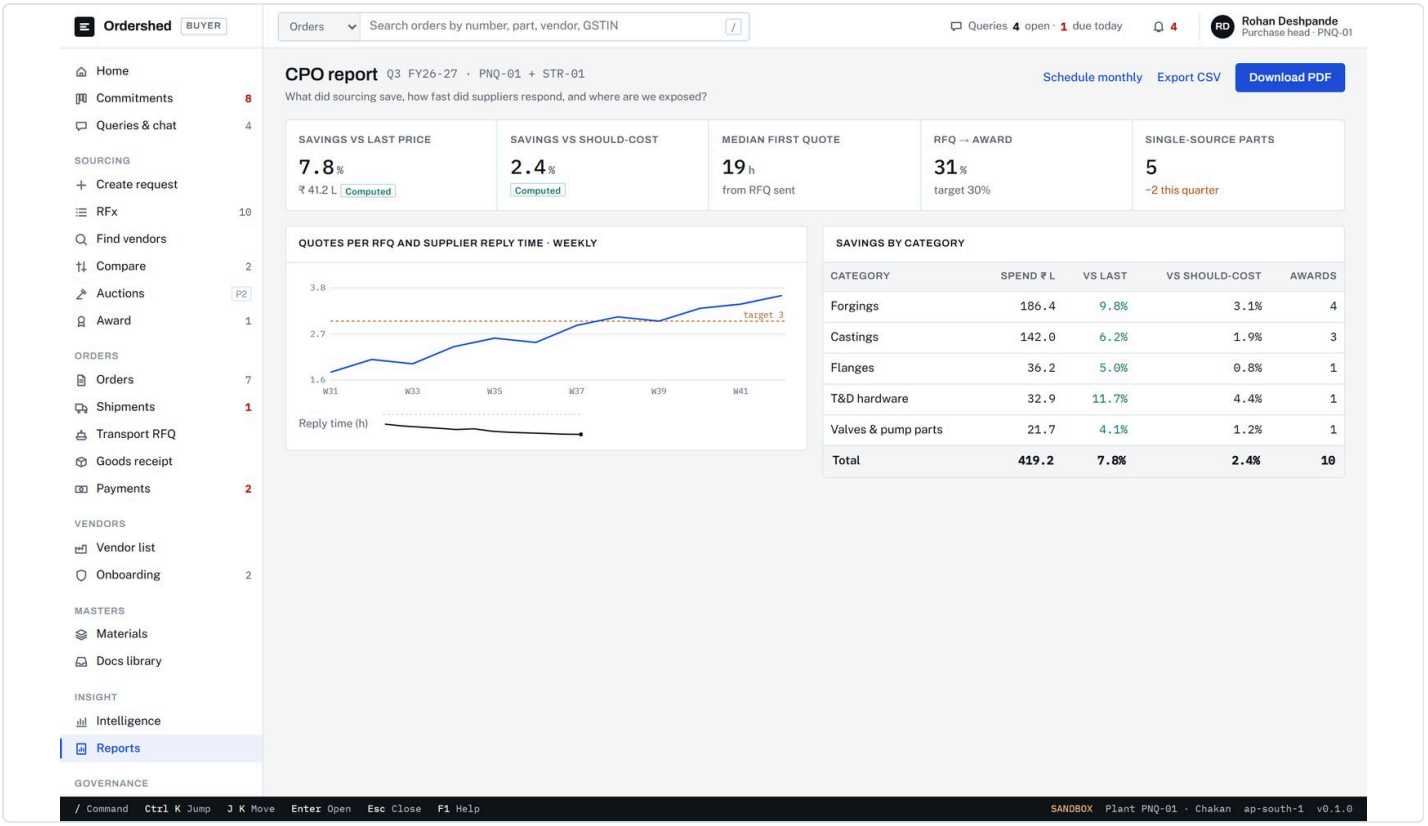

Docs library

Domestic and export packs; every document linked to its PO line.

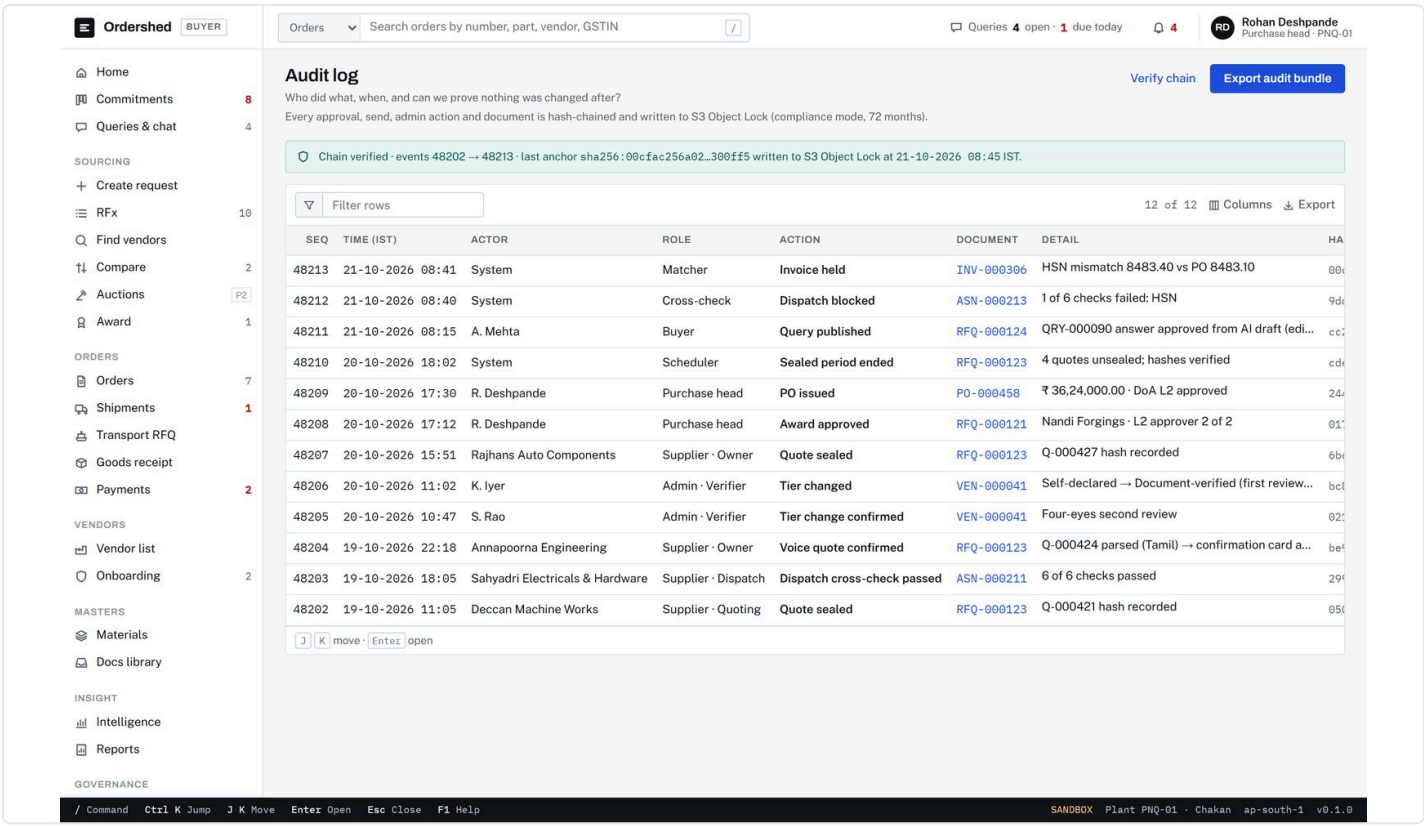

Intelligence

Price index by part family with WPI overlay; import-substitution candidates.

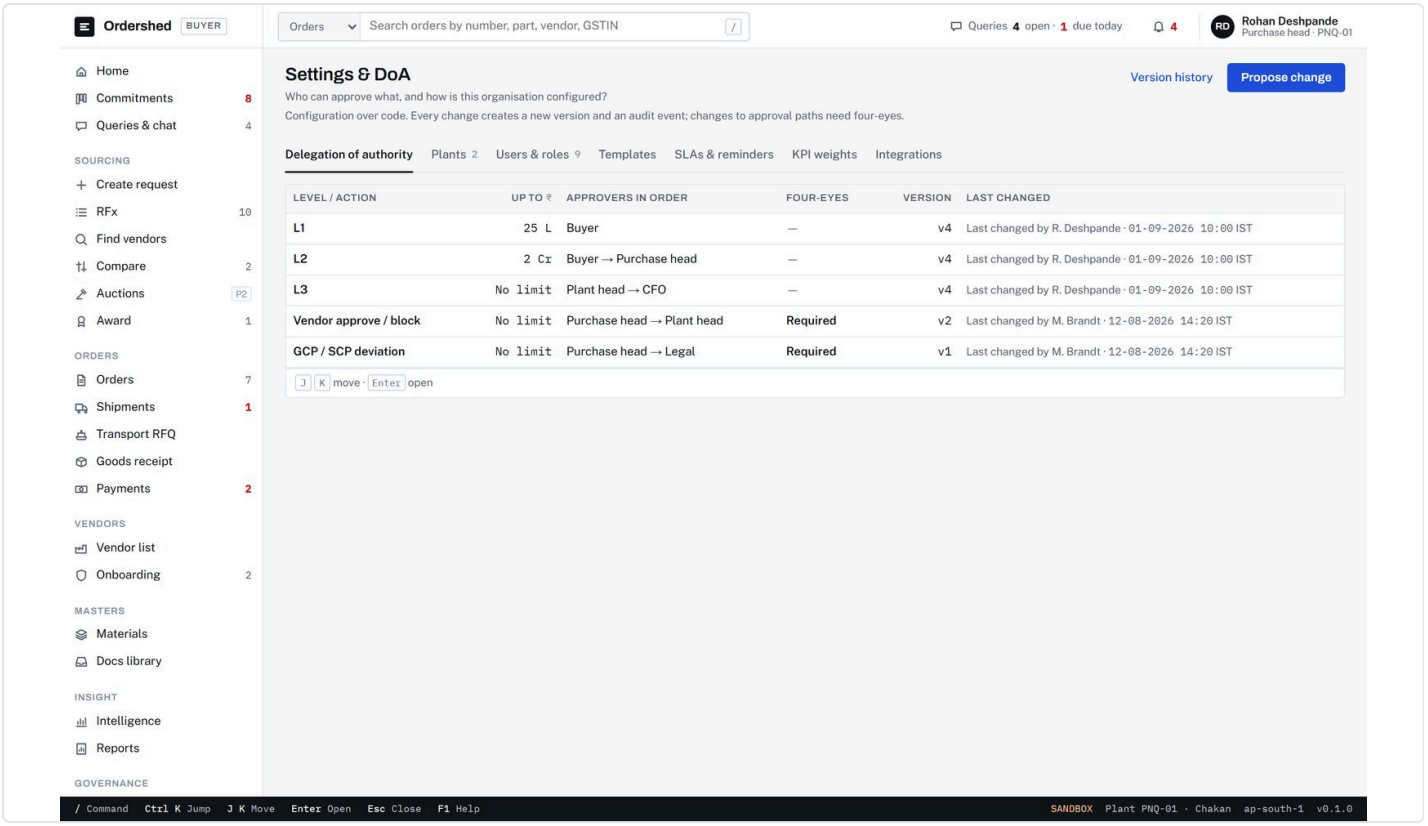

CPO report

Savings vs last price and vs should-cost, reply time, RFQ to award.

Audit log

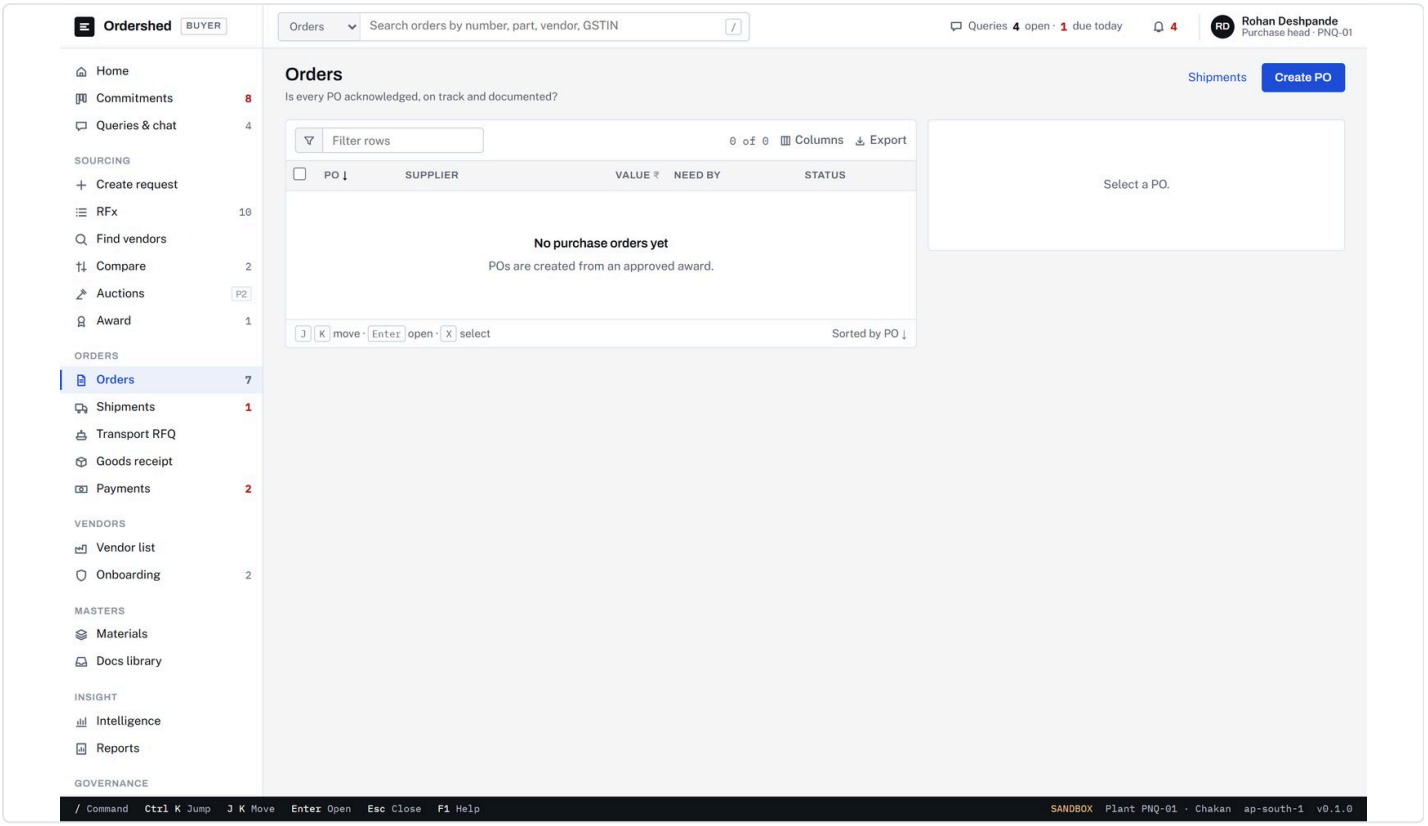

Hash-chained events with the previous and current hash; chain verified against S3 Object Lock.

Settings & DoA

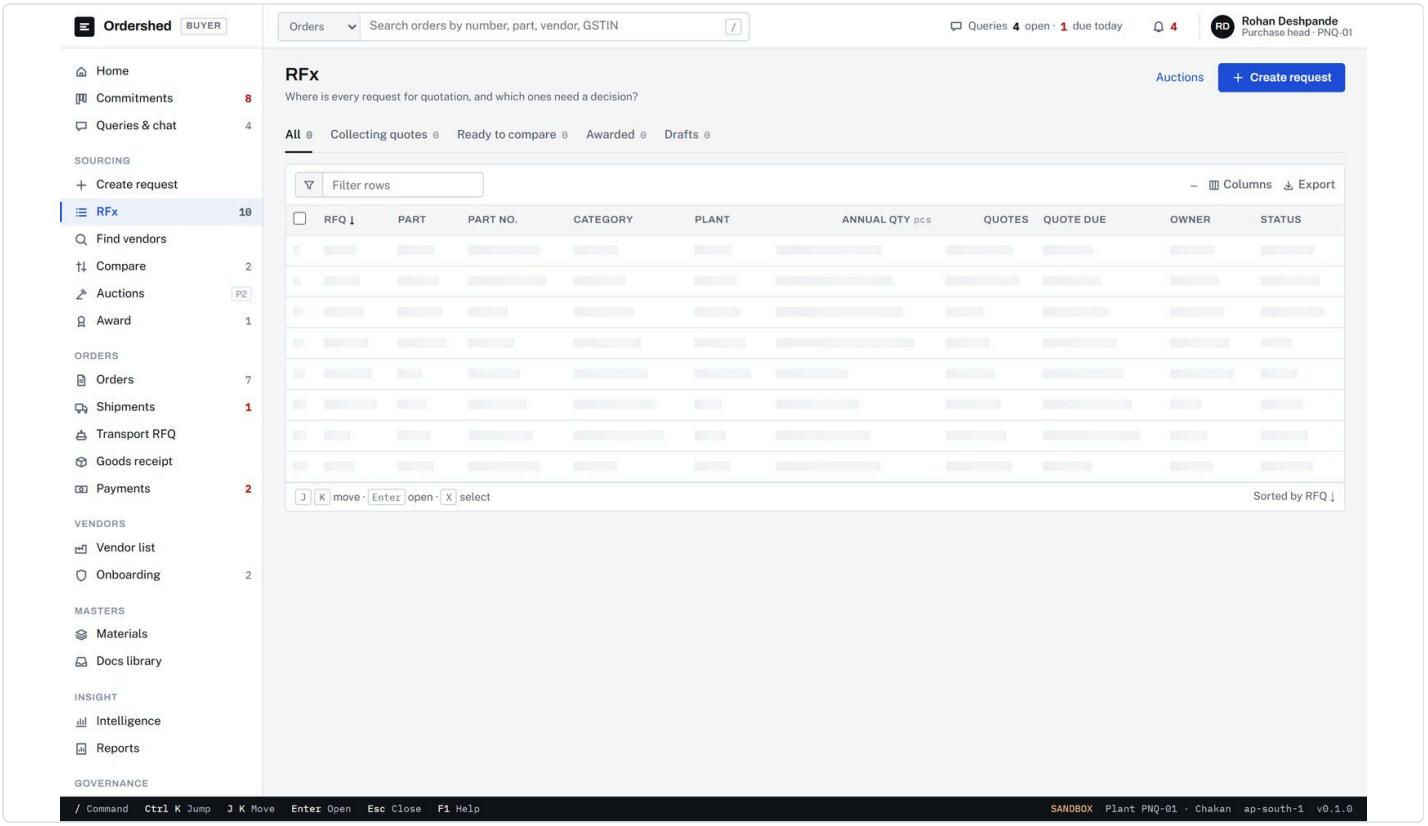

Approval levels, plants, users, SLAs and integrations, all versioned.

List states Every list has designed empty, loading and error states. 3

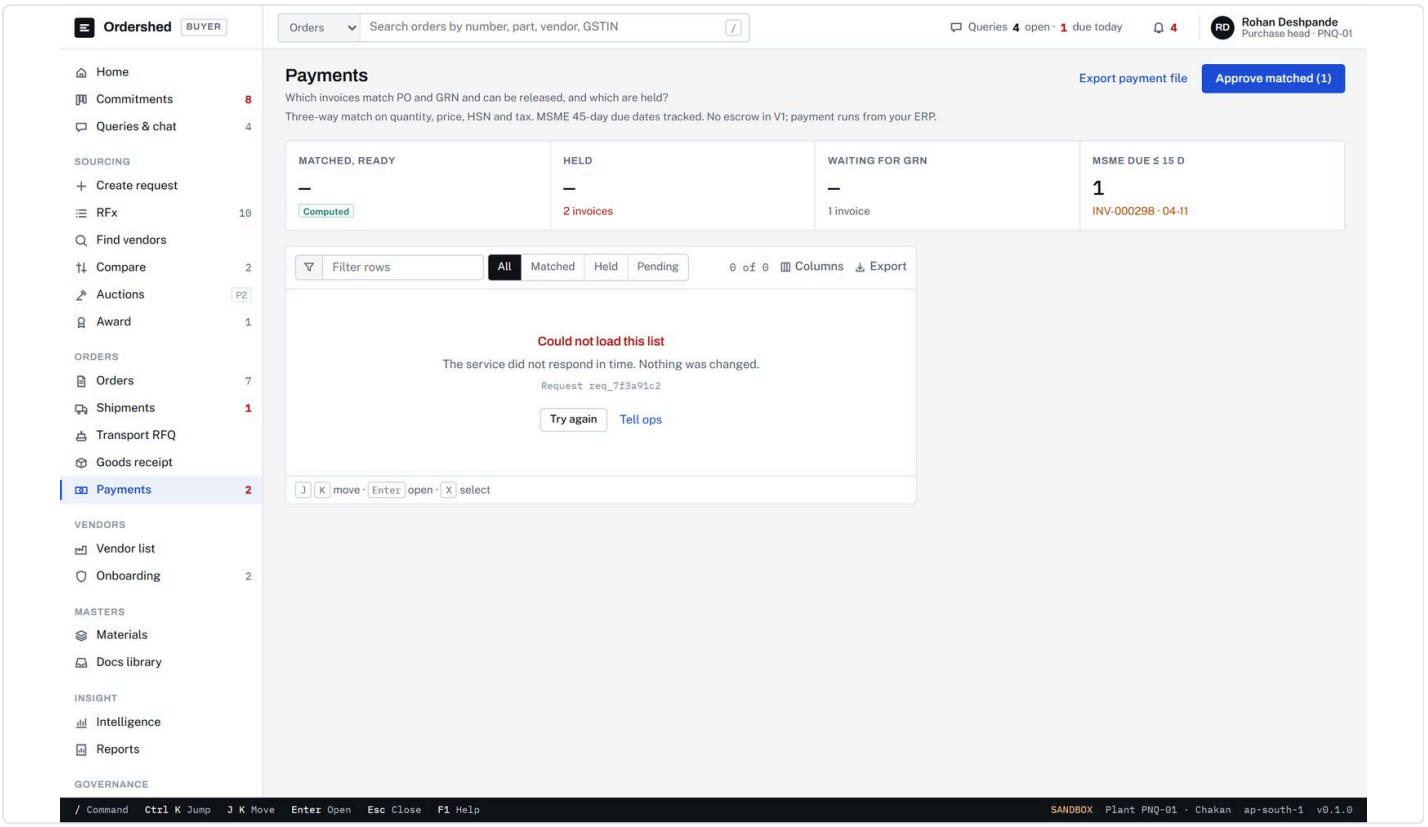

Empty

Says what will appear and how to start.

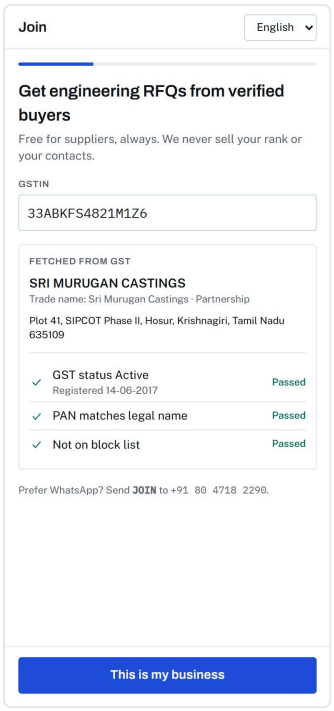

Loading

Skeleton rows in the table's own layout.

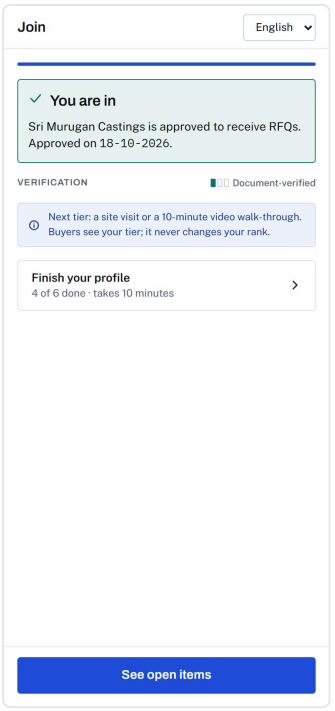

Error

Says nothing was changed, shows the request ID, offers retry.

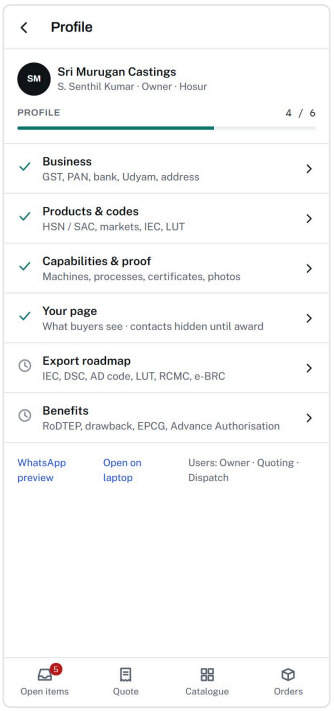

Join

GSTIN fetches the legal name, address and status with checks. Language picker for English, Tamil, Hindi, Kannada, Telugu.

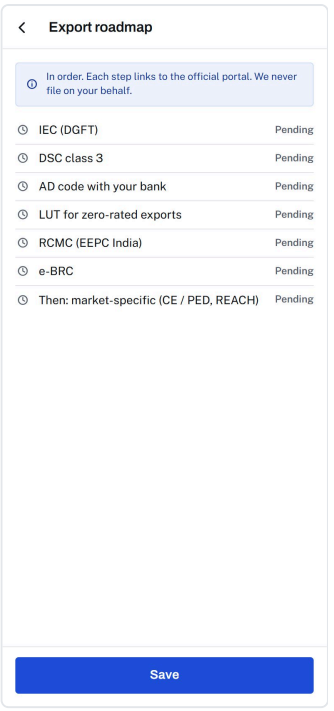

Join · approved

Tier shown; next step is a site visit or video walk-through.

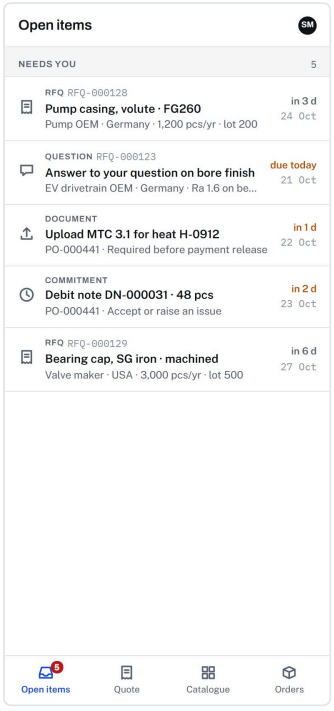

Profile

One screen, six rows, done once.

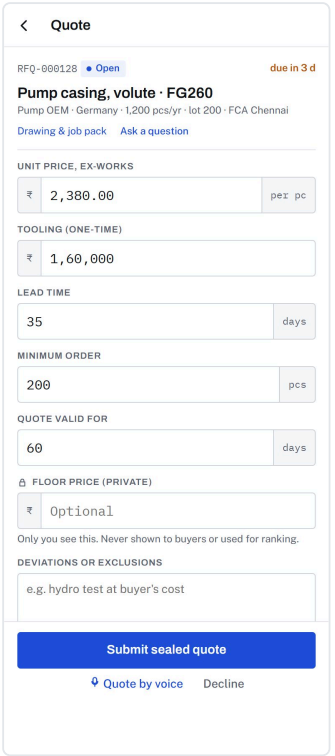

Export roadmap

IEC, DSC, AD code, LUT, RCMC, e-BRC in order.

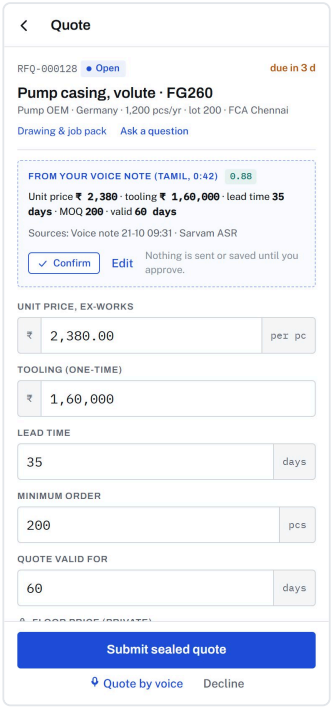

Open items

Everything waiting on the supplier in one list.

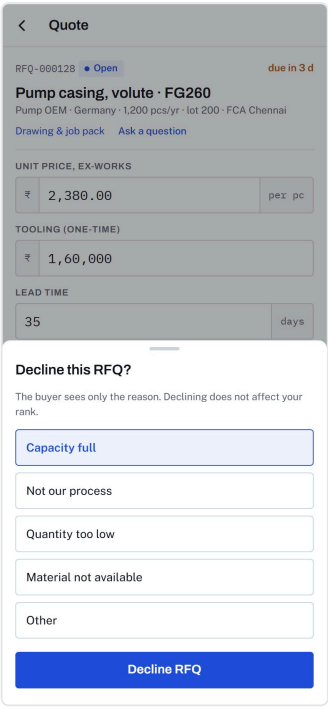

Quote

Five fields plus a private floor price that is never shown to buyers or used for ranking.

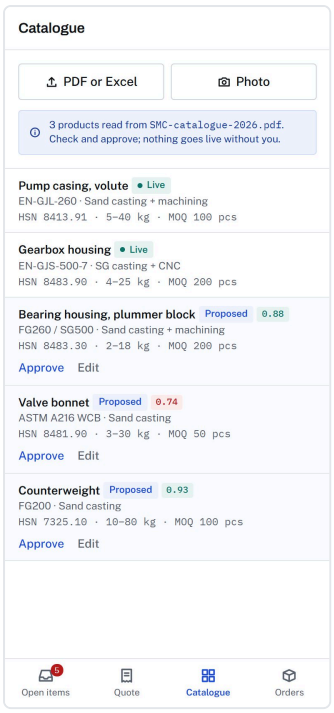

Voice quote

A Tamil voice note becomes a confirmation card; nothing saves until Confirm.

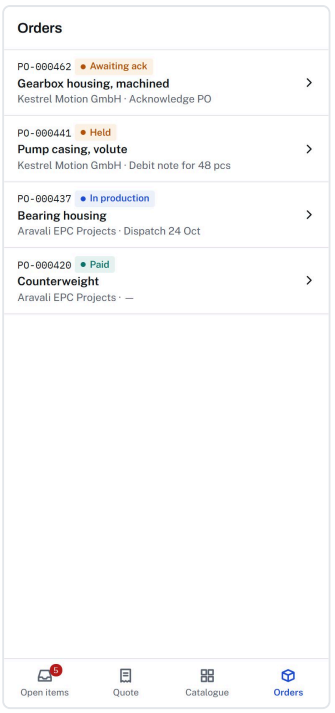

Decline

One tap, with a reason; declining never affects rank.

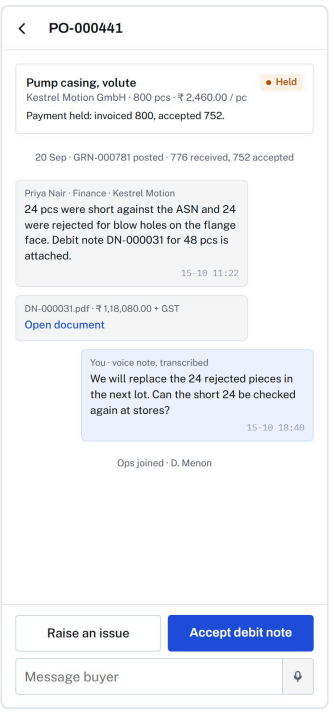

Catalogue

PDF or photo read into product rows, proposed for approval.

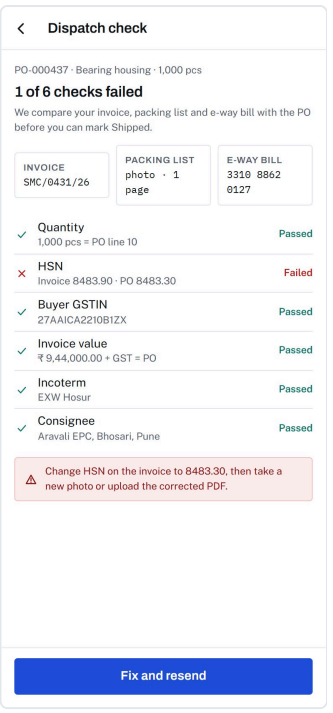

Orders

POs with the next action.

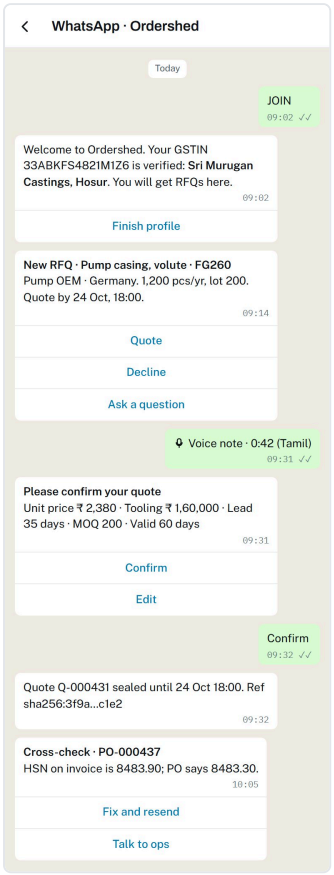

Orders & chat

Debit-note conversation with Accept or Raise an issue.

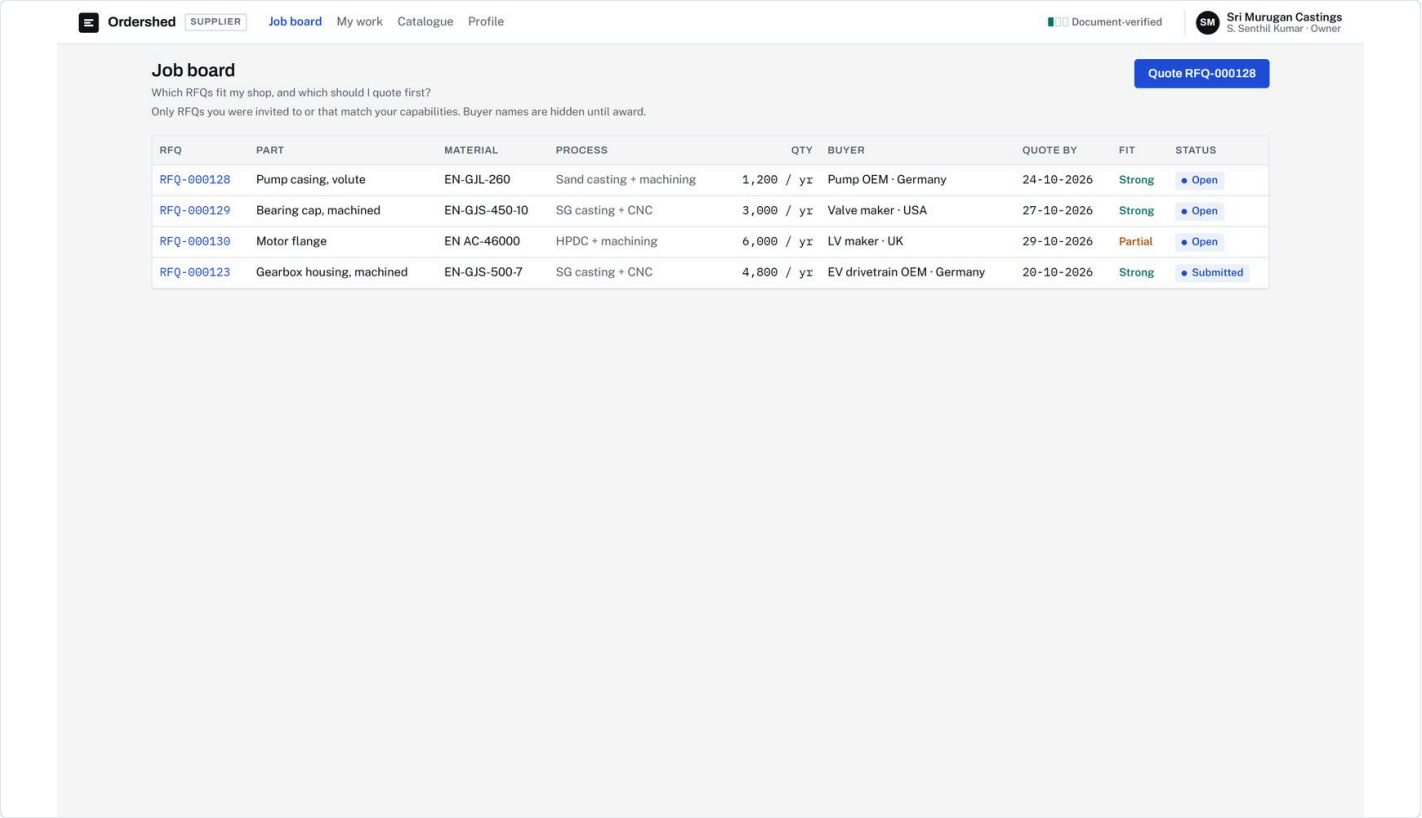

Dispatch cross-check

Six checks before Shipped, with the exact fix for the one that failed.

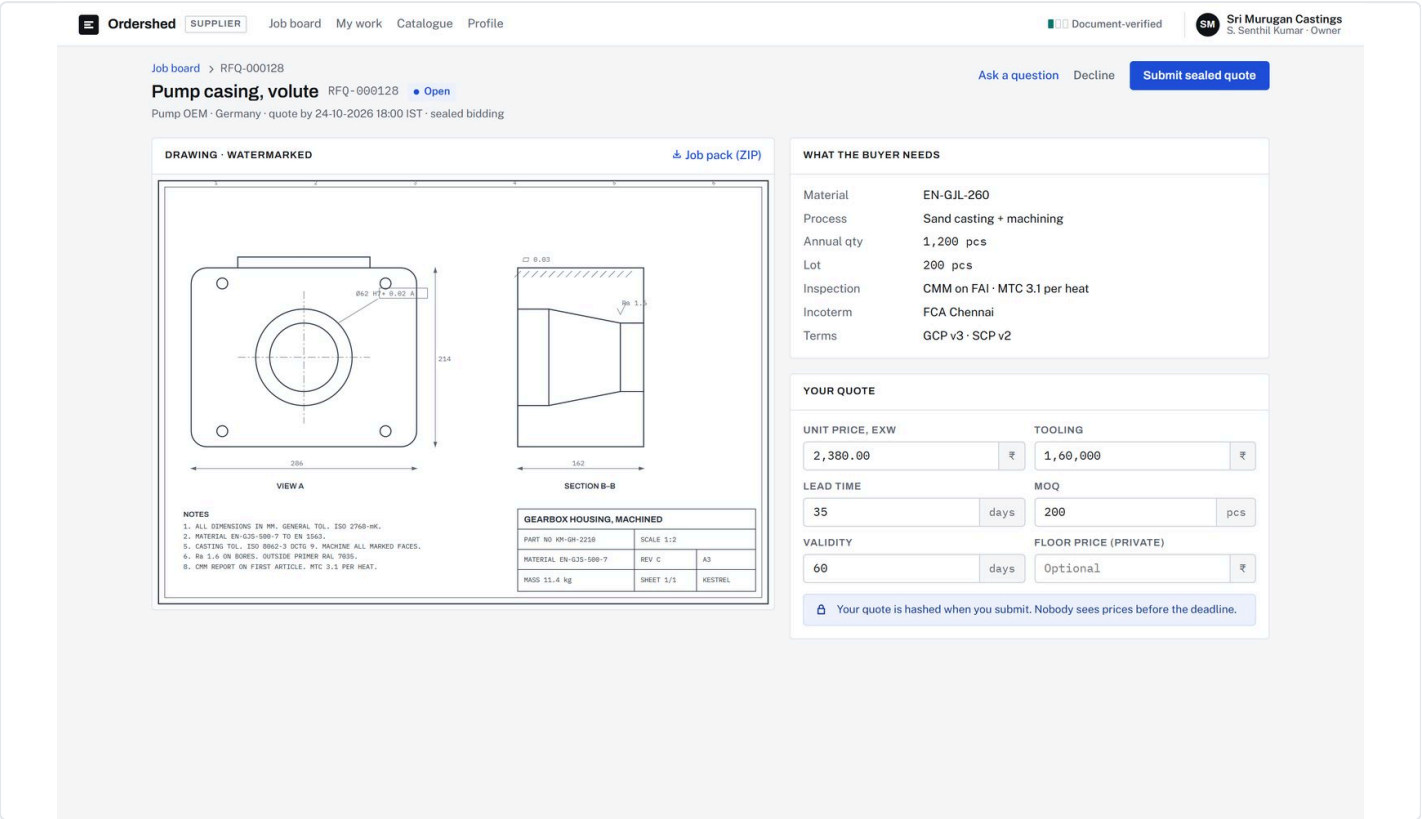

WhatsApp flow

JOIN, new RFQ with Quote · Decline · Ask, voice quote confirmation, sealed receipt, cross-check result.

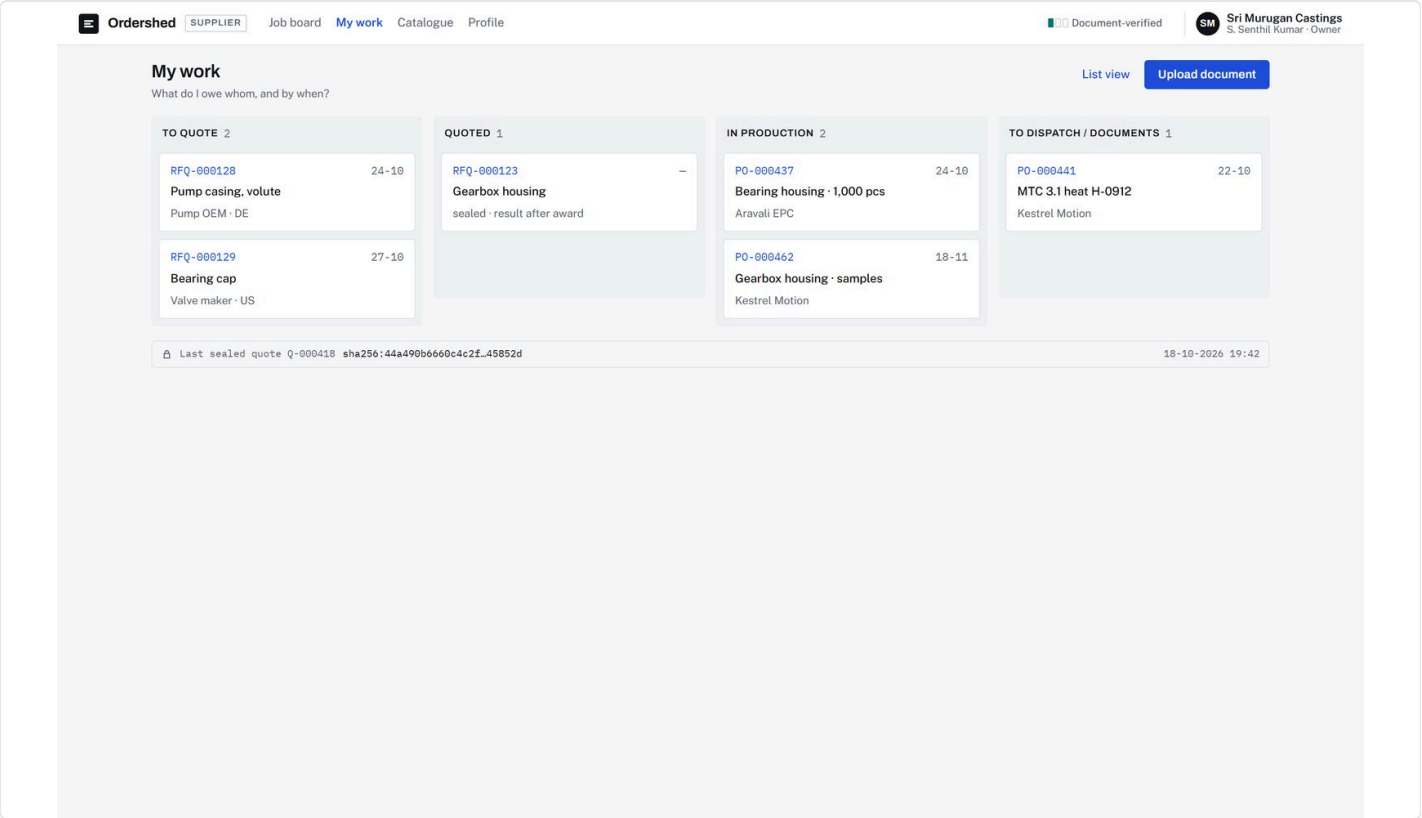

Job board

RFQs that fit the shop; buyer names hidden.

Job pack

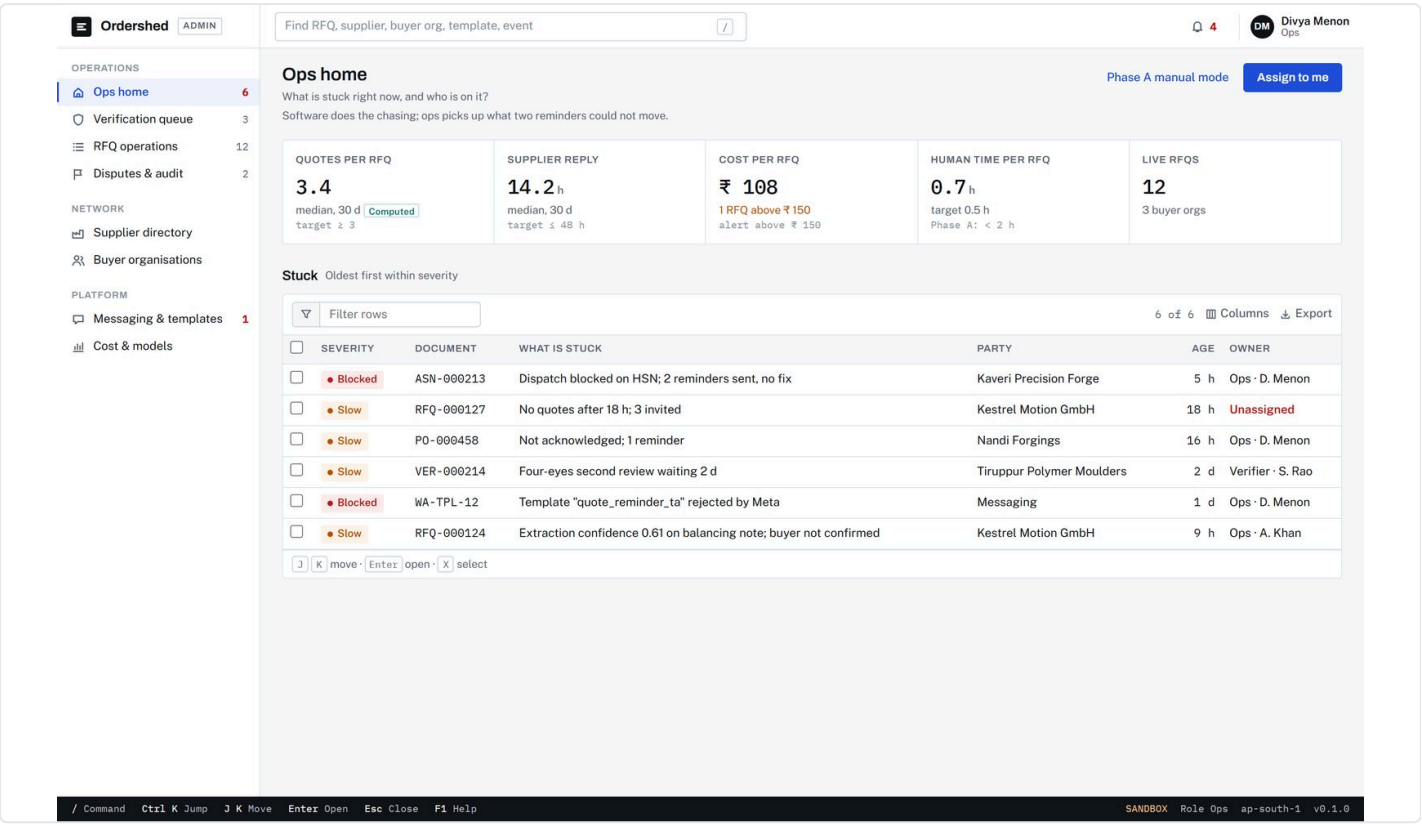

Watermarked drawing and the quote form side by side.

My work

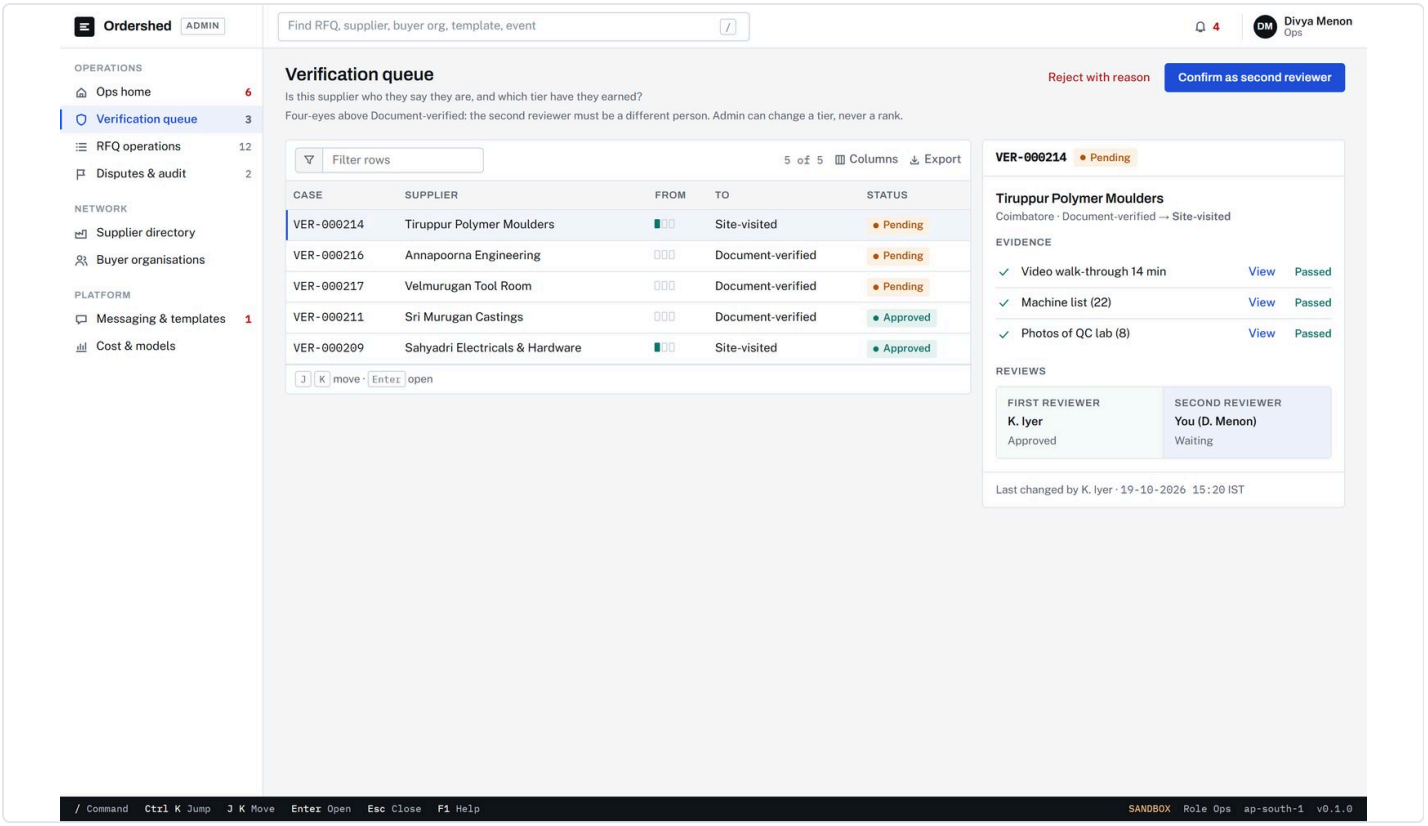

What is owed to whom, by when.

Admin console Our own operations.

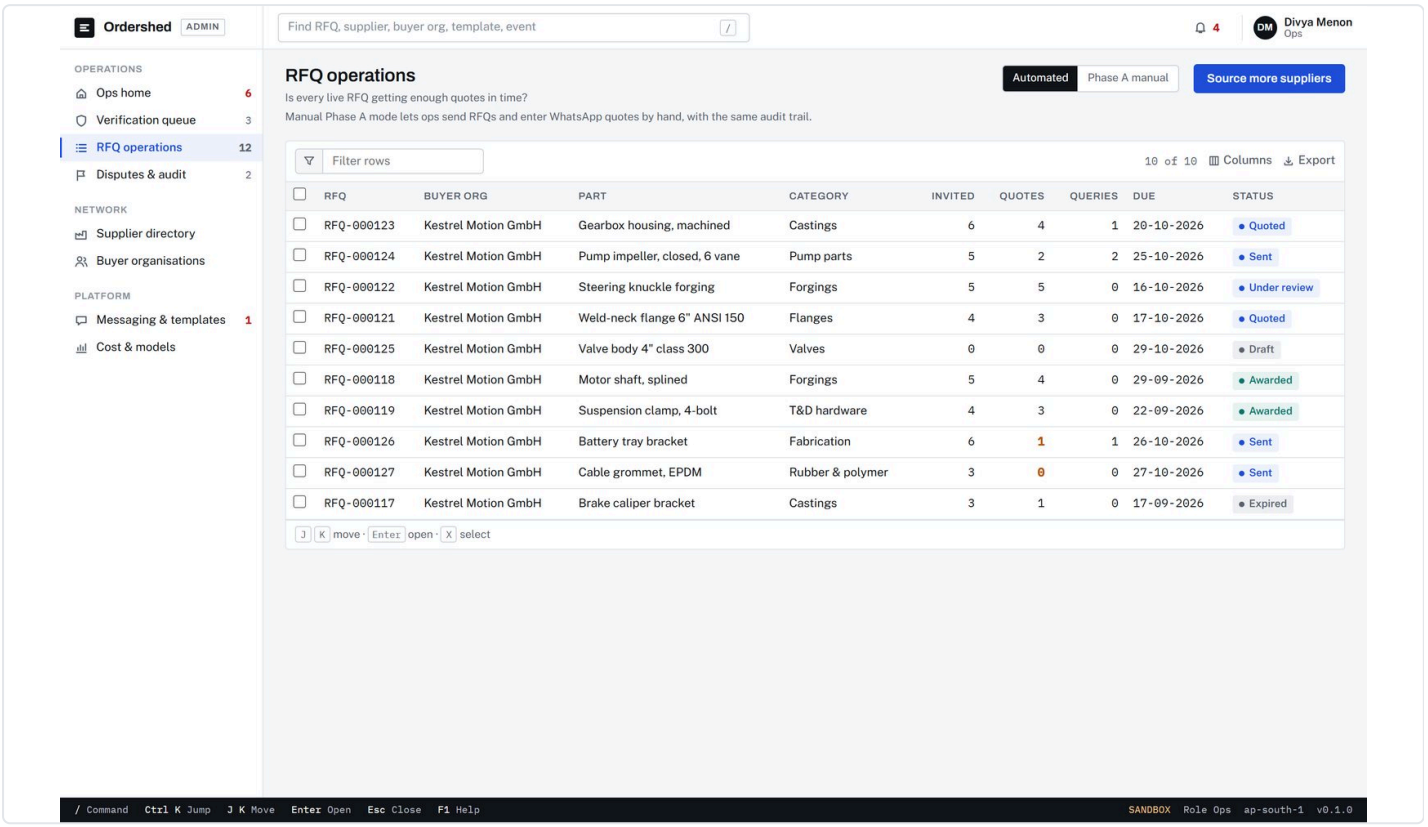

Ops home

What is stuck, by severity and age, with the MVP targets.

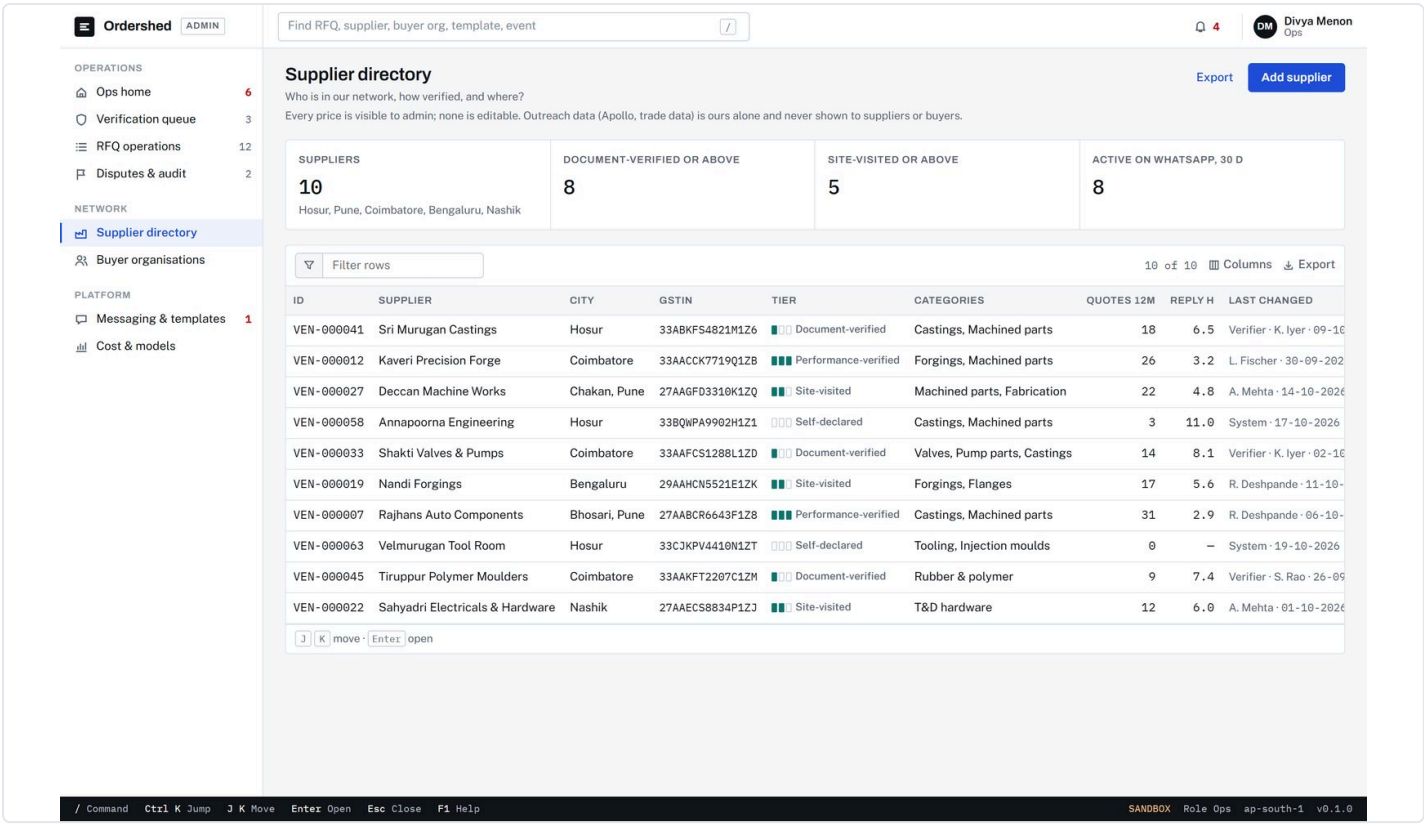

Verification queue

Evidence checklist and four-eyes review. Admin changes tier, never rank.

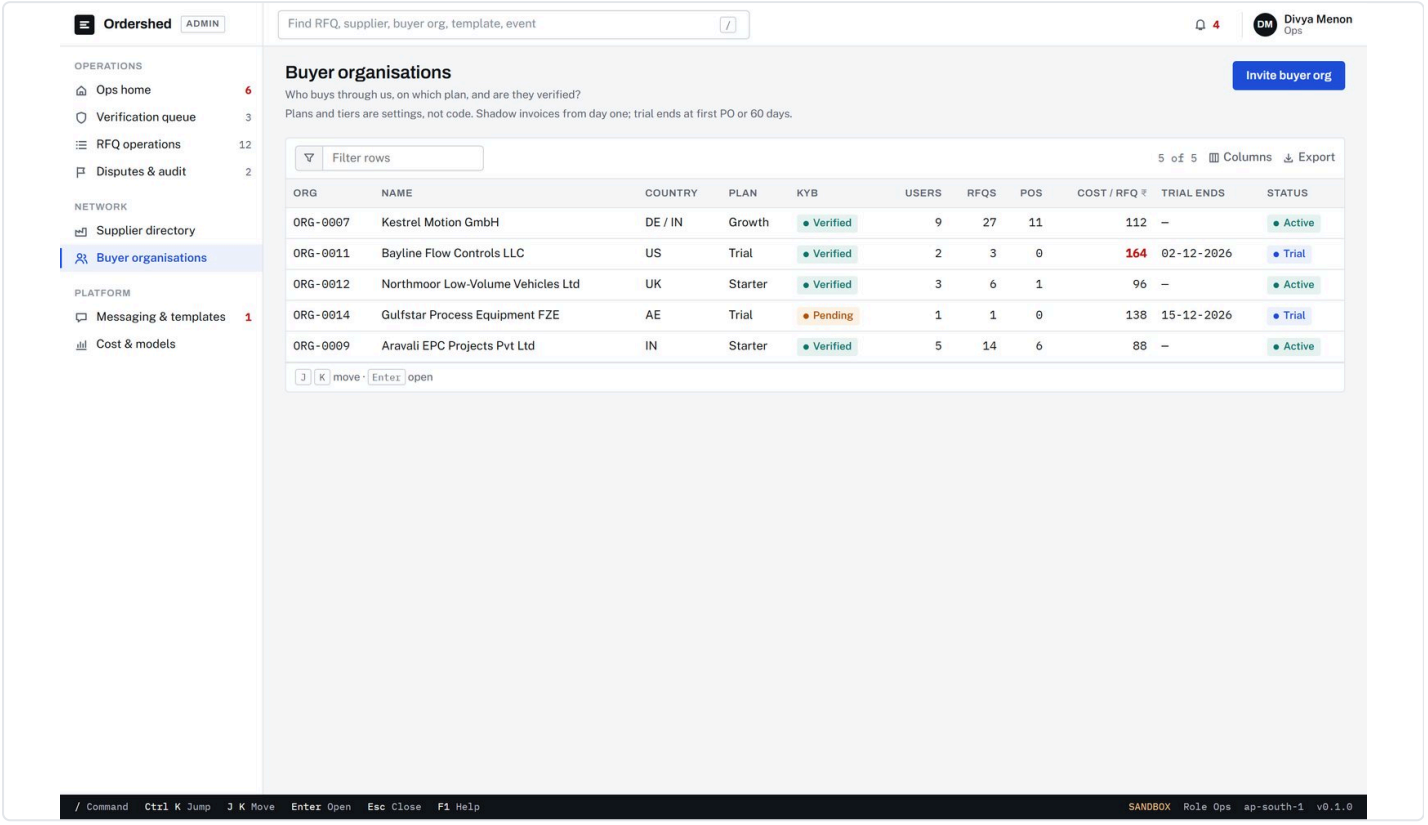

RFQ operations

Low-quote alerts, nudges, Phase A manual mode.

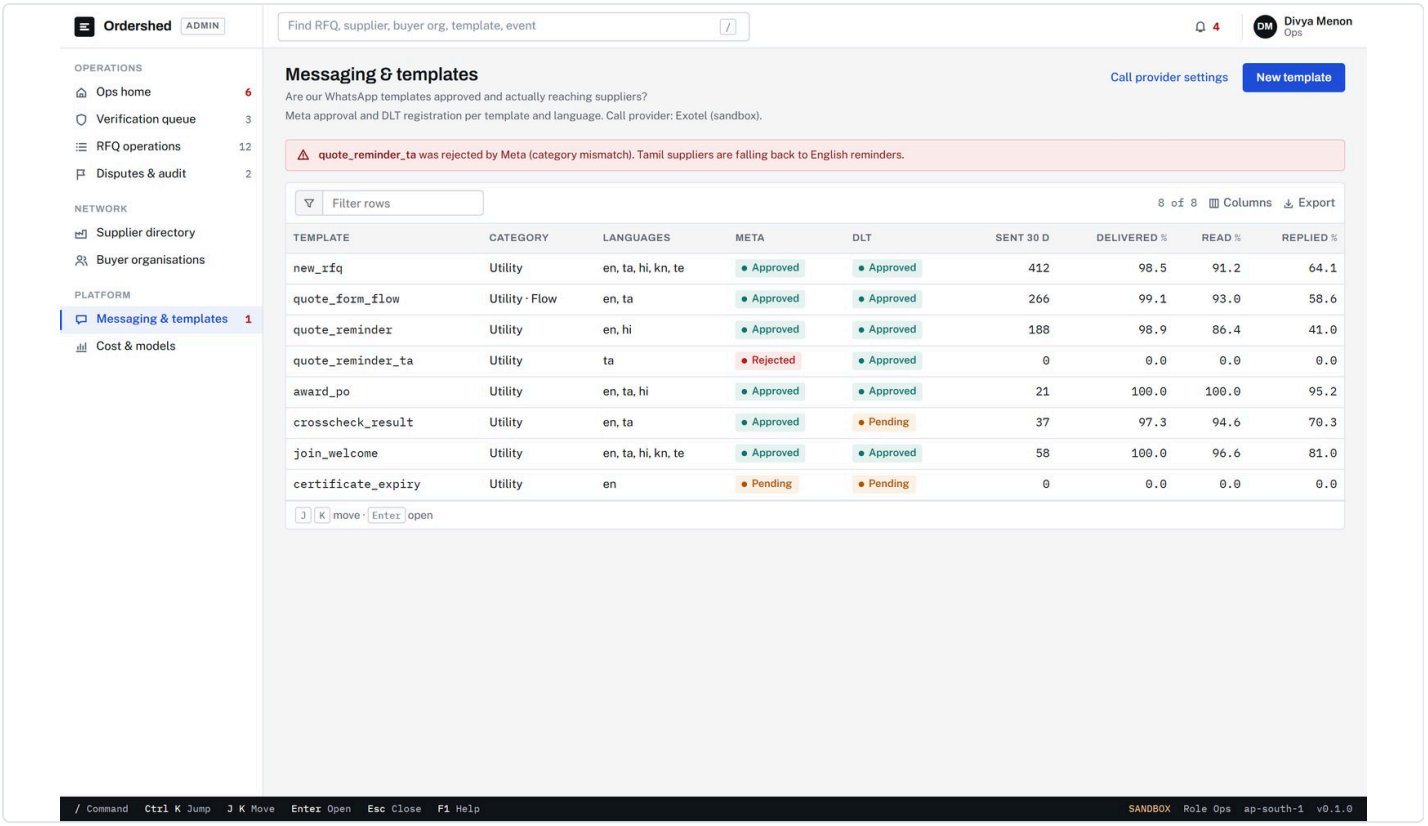

Supplier directory

Network by tier and activity. Admin sees every price, edits none.

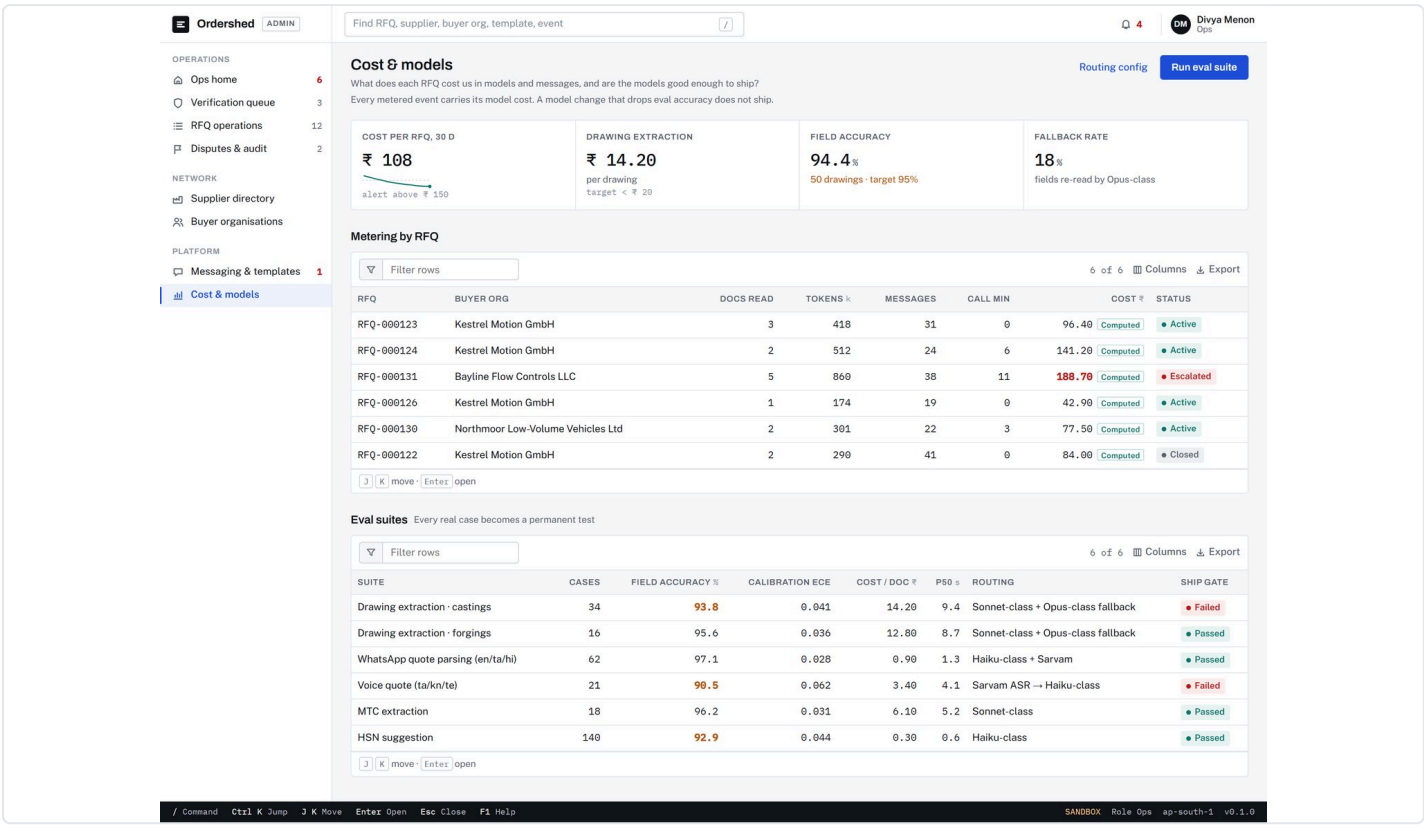

Buyer organisations

Each buyer company's plan, company verification (KYB) status and free-trial end date, plus what an RFQ costs us to run in AI and messaging. Above ₹ 150 per RFQ it shows in red.

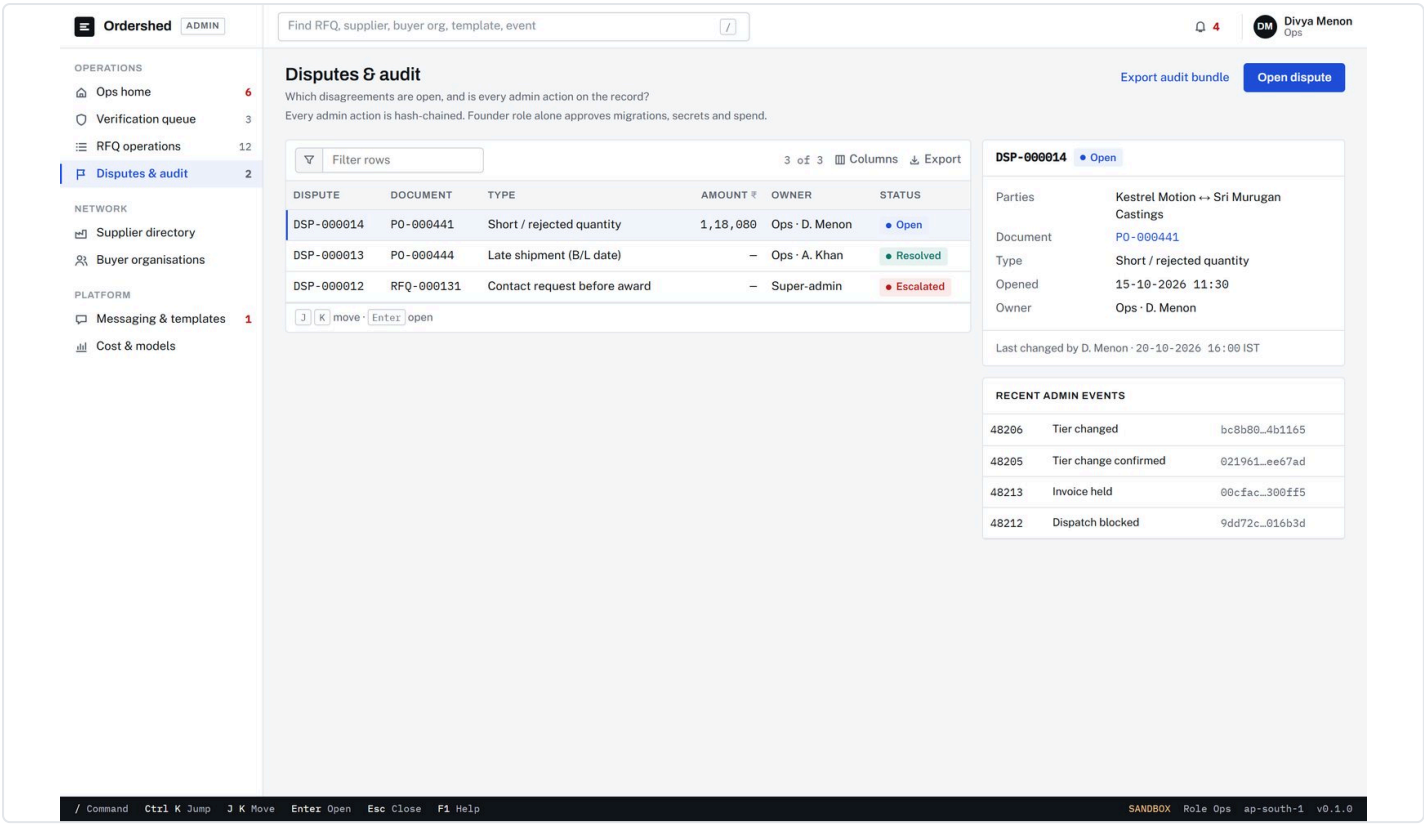

Messaging & templates

Meta and DLT status, delivery, read and reply rates.

Cost & models

What each RFQ costs us, step by step, and the accuracy tests an AI model change must pass before it ships.

Disputes & audit

Open disputes and hashed admin events.
